Video 5.1: This video demonstrates the process of updating the BIOS for MAXSUN motherboards. It covers preparing a FAT32 formatted USB drive, downloading the latest BIOS file from the MAXSUN support site, copying the extracted EFI folder to the USB drive, removing all hard drives (M.2 and SATA SSDs) before updating, inserting the USB drive, entering the BIOS interface by repeatedly pressing the 'Delete' key after power on, loading optimized defaults (F9 and Enter), disabling 'Flash Write Protect' under 'Startup' settings, saving and resetting (F10 and Enter), pressing 'F11' repeatedly to select the USB storage device boot option starting with UEFI, allowing the system to automatically execute the update program, pressing 'Y' to confirm flashing, and finally, pressing Ctrl+Alt+Delete to restart into the new BIOS after the update is complete.

- 1. Prepare USB Storage:** Format a USB storage device to FAT32. Other boot disk types like PE or DOC cannot be used.
- 2. Download BIOS:** Visit the official MAXSUN support site to download the latest BIOS file for your specific motherboard model. Unzip the downloaded file.
- 3. Copy EFI Folder:** Copy the entire extracted EFI folder to the root directory of the prepared USB storage device.
- 4. Remove Drives:** Before updating the BIOS, remove all hard drives, including M.2 and SATA SSDs, from the motherboard.
- 5. Insert USB and Enter BIOS:** Insert your USB storage device into a USB port on the motherboard. Power on the system and repeatedly press the 'Delete' key to enter the BIOS interface.
- 6. Load Optimized Defaults:** In the BIOS, press 'F9' and then 'Enter' to load optimized defaults.
- 7. Disable Flash Write Protect:** Navigate to the 'Startup' section and ensure 'Flash Write Protect' is set to 'Disabled'.
- 8. Save and Reset:** Press 'F10' and then 'Enter' to save the configuration and reset the system.
- 9. Select Boot Device:** As the system restarts, repeatedly press the 'F11' key to access the boot device selection menu. Select the USB storage device boot option that starts with 'UEFI'.

- Execute Update:** The system will automatically execute the program to update the BIOS. Follow any on-screen prompts. When prompted to flash, press 'Y'.
