Reasons Why Doing Practice Exams Works

1. Most importantly, practice tests tell candidates which topics they have not mastered and encourage them to focus future learning on weak areas.
2. Almost as important, practice tests tell candidates which topics they have already mastered. They can then direct their learning to other areas and spend minimal further time on the topics they already know.
3. Practice tests can also feed back to the instructional team the strengths and weaknesses of each candidate and for the candidate group. It can tell which topics have been successfully learned and which areas need more work.
4. Its well understood in psychology that you are more likely to retain something if you learn it spaced (separated) over time. Since practice tests stimulate revision and studying, they encourage earlier learning and so space out learning, which is likely to improve retention.
5. The accuracy and fairness of exams can be impacted by some candidate's fear or anxiety around the exam process. Practice tests can reduce test anxiety.
