4. SETUP AND ASSEMBLY INSTRUCTIONS

Assembling the Smolny Cathedral model requires patience and attention to detail. Follow these steps for a successful build:

1. Preparation:

- Clear a large, well-lit workspace.
- Open all block bags. It is highly recommended to sort the pieces before starting. Sort by color, type (e.g., 1x1, 2x2), and number of studs. Using multi-compartment boxes can greatly assist in this process.
- Have a pair of fine-tipped tweezers readily available. These are essential for handling the tiny blocks and correcting any placement errors.

2. Follow the Instruction Booklet:

- Refer to the included instruction booklet for step-by-step visual guides.
- Pay close attention to the illustrations. Some pieces may be hidden or less obvious in the drawings, requiring careful observation.
- It is advisable to complete one or two instruction steps at a time, gathering only the necessary pieces for those specific steps to avoid confusion.

3. Layer-by-Layer Construction:

- The model is built layer by layer. Ensure each layer is firmly connected before proceeding to the next.
- The smooth surface of each brick ensures good compactness, allowing for a sturdy build.

4. Patience and Precision:

- Micro mini blocks require precision. Take your time and double-check placements.
- If a piece is difficult to place, use tweezers. If a mistake is made, carefully separate the blocks.
