Power Connection

Plug the cooktop into a standard 120V/60Hz electrical outlet. Ensure the power cord is not pinched or placed near hot surfaces. For safety, avoid placing wet cookware on the heating element to prevent rust.

3. OPERATING INSTRUCTIONS

Turning On and Adjusting Heat

Each burner has an independent control knob. To turn on a burner, rotate its knob from the 'OFF' position clockwise to your desired heat setting (from 1 to MAX). The indicator light next to the knob will illuminate, signaling that the burner is active and heating.

Indicator Lights and Temperature Control

The indicator light will stay on until the set temperature is reached. Once the desired temperature is achieved, the light will turn off. If the temperature drops below the set point, the light will come back on, and the burner will continue heating to maintain consistency. The cooktop is equipped with a thermal fuse for overheating protection.

Compatible Cookware

Unlike induction cookers, this infrared burner is compatible with all pan-shaped cookware made of aluminum, stainless steel, ceramic, or glass. This includes frying pans, woks, stovetop teapots, and more. It can accommodate cookware up to 7.1 inches in diameter and weighing up to 22 lbs.
