

## BOYA BY-XM6-S2

# BOYA BY-XM6 S2 2.4GHz Dual Wireless Lavalier Microphone System User Manual

Model: BY-XM6-S2

## 1. INTRODUCTION

The BOYA BY-XM6 S2 is a 2.4GHz dual-channel wireless microphone system designed to capture clear, broadcast-quality sound. It is ideal for a wide range of applications including vlogging, live streaming, interviews, and mobile journalism. This system offers stable signal transmission, high-fidelity recording, and an intuitive OLED display, making your audio recording process efficient and reliable.

## 2. PACKAGE CONTENTS

Please verify that all items listed below are included in your package:

### What's In The Box?

1X BY-XM6 RX Receiver

2X BY-XM6 TX Transmitter

1x 3.5mm TRS to TRS Output Cable for Cameras

1x 3.5mm TRS to TRRS Output Cable for Smartphones

3x USB-C Charging Cable

2x Lavalier Microphone

2x Fur Windshield for Built-in Microphone

1x Pouch

Image: All components included in the BOYA BY-XM6 S2 system package.

- 1x BY-XM6 RX Receiver
- 2x BY-XM6 TX Transmitter
- 1x 3.5mm TRS to TRS Output Cable for Cameras
- 1x 3.5mm TRS to TRRS Output Cable for Smartphones
- 3x USB-C Charging Cable
- 2x Lavalier Microphone
- 2x Fur Windshield for Built-in Microphone
- 1x Pouch

## 3. PRODUCT OVERVIEW

### 3.1 Components

The BY-XM6 S2 system consists of two transmitters (TX) and one receiver (RX). Each unit is compact and features an OLED display for easy monitoring of settings and battery life.

Image: The BOYA BY-XM6 S2 system, including the receiver (RX) and two transmitters (TX).

### 3.2 Key Features

- **2.4GHz Digital Frequency:** Ensures stable and reliable wireless transmission up to 100 meters (328 feet) without obstacles.
- **Dual Channel System:** Supports two person interviewing or recording simultaneously.
- **High-Fidelity Recording:** Built-in low-noise microphone and included lavalier microphones provide clear audio.
- **OLED Display:** Easy-to-read screen shows battery level, signal strength, audio levels, and more.
- **Multiple Input Modes:** Can be used with the built-in microphone or external lavalier microphones.
- **Real-time Headphone Monitoring:** Allows you to monitor audio output directly from the receiver.
- **Mono/Stereo Switch:** Provides flexibility for post-production by allowing selection between mono and stereo recording modes.
- **Long Battery Life:** Up to 7 hours of operation time on a single charge.
- **Compact and Portable:** Lightweight design for easy carrying and discreet use.

## 2.4GHz AFH Wireless Lavalier Microphone System

2.4GHz AFH wireless lavalier microphone system makes your recording journey easier.

Chosen by 30M Users Worldwide

Multiple input modes

Up to 7 hours operation time

Ultra compact size

## 4. SETUP GUIDE

### 4.1 Charging the Devices

Before first use, fully charge the transmitter (TX) and receiver (RX) units using the provided USB-C charging cables. Connect the cables to a standard USB power adapter (not included) or a computer's USB port. The OLED display will indicate charging status.

### 4.2 Powering On/Off

- **Power On:** Long press the power button on both the TX and RX units until the OLED display illuminates.
- **Power Off:** Long press the power button again on both units until the display turns off.

### 4.3 Connecting to Recording Devices

The BY-XM6 S2 system is designed for plug-and-play operation. The TX and RX units will automatically pair

upon powering on. If pairing fails, refer to the troubleshooting section.

- **For Cameras (DSLR/Mirrorless):** Use the 3.5mm TRS to TRS output cable. Connect one end to the RX's 'OUT' port and the other end to your camera's microphone input.
- **For Smartphones/Tablets:** Use the 3.5mm TRS to TRRS output cable. Connect one end to the RX's 'OUT' port and the other end to your smartphone's headphone/microphone jack. For devices without a 3.5mm jack, an appropriate adapter (e.g., USB-C to 3.5mm or Lightning to 3.5mm) may be required (not included).
- **Connecting Lavalier Microphone:** Plug the lavalier microphone into the 'MIC IN' port on the TX unit. Ensure it is securely connected.

## 5. OPERATING INSTRUCTIONS

### 5.1 Mute Function

To mute the transmitter, short press the mute button on the TX unit. A mute icon will appear on the OLED display. Short press again to unmute.

### 5.2 Gain Control

Adjust the audio input gain on the TX unit to optimize sound levels and prevent distortion. Use the '+' and '-' buttons to increase or decrease the gain. Monitor the audio level bar on the OLED display to ensure levels are within the optimal range.

### 5.3 Mono/Stereo Mode Selection

The receiver (RX) allows you to switch between mono and stereo output modes. Navigate through the menu on the RX unit to select the desired mode. In mono mode, both transmitter audio signals are mixed into a single channel. In stereo mode, each transmitter's audio is output to a separate channel (left/right).

### 5.4 Real-time Monitoring

Connect headphones to the 3.5mm headphone jack on the RX unit to monitor the audio in real-time. This allows you to check audio quality and levels during recording.

## 6. MAINTENANCE

- **Cleaning:** Use a soft, dry cloth to clean the units. Do not use harsh chemicals or abrasive materials.
- **Storage:** Store the system in a cool, dry place away from direct sunlight and extreme temperatures. Use the provided pouch for protection.
- **Battery Care:** For optimal battery life, avoid fully discharging the units frequently. Charge them regularly, even if not in use for extended periods.
- **Windshields:** Regularly clean or replace the fur windshields to maintain effective wind noise reduction.

## 7. TROUBLESHOOTING

Issue	Possible Cause	Solution
No sound or low volume	Incorrect cable connection; low gain setting; muted transmitter; low battery.	Ensure cables are securely connected. Adjust gain on TX. Check if TX is muted. Charge units.
Voice breaks or signal dropouts	Obstacles between TX and RX; exceeding operating range; strong interference.	Reduce distance between TX and RX. Ensure clear line of sight. Avoid areas with strong Wi-Fi or other 2.4GHz devices.
Poor noise cancellation / Excessive background noise	Improper microphone placement; no windshield used; high ambient noise.	Ensure lavalier mic is placed correctly (e.g., 6-8 inches from mouth). Use the fur windshield, especially outdoors. Record in quieter environments.
Units not pairing	Units too far apart; interference; pairing error.	Bring TX and RX closer together. Power cycle both units. Refer to manual for manual pairing steps if auto-pairing fails.
OLED display not working	Low battery; unit not powered on; hardware issue.	Charge the unit. Long press power button to ensure it's on. If issue persists, contact support.

## 8. TECHNICAL SPECIFICATIONS

Feature	Specification
Transmission Type	2.4GHz Digital Frequency
Operating Range	Up to 100m (328ft) (without obstacle)
RF Output Power	<10mW
Polar Pattern	Omnidirectional
Frequency Response	35Hz-18KHz
Maximum SPL (Built-in Mic)	120dB SPL
Maximum SPL (Lavalier Mic)	110dB SPL
Sensitivity (Built-in Mic)	-39dB
Sensitivity (Lavalier Mic)	-39dB

Feature	Specification
SNR	> 84dB
Power Requirements	Built-in Li-ion Battery or USB-C DC 5V
Built-in Battery Life	Approx. 7 hours
Audio Inputs	3.5mm TRS MIC/LINE IN Jack or Built-in Microphone
Weight (TX/RX)	Approx. 32g (1.13oz) each
Dimensions (TX/RX)	62.1 × 31.6 × 16.5mm
Audio Output Connector	3.5mm Headphone Jack; 3.5mm TRS Output Jack
Audio Output Level	-60 dBV to -20dBV

## 9. WARRANTY AND SUPPORT

This product is covered by a manufacturer's warranty. For specific warranty terms and conditions, please refer to the documentation provided with your purchase or visit the official BOYA website. For technical support, service, or inquiries regarding your BOYA BY-XM6 S2 system, please contact the importer/packer:

### [BY-XM6 Q&A](#)

Q1: Unable to use the product with an iPhone.  
A1:  
①After connecting TX and RX, the RX receiver can be used with an iPhone 6, iPhone 6s, or iPad using a TRS to TRRS cable.  
②For phones without a 3.5mm port (e.g., iPhone 12/13/14), you need to use a TRS to Lightning cable for connection.

Q2: Unable to use the product with an Android phone.  
A2:  
①After connecting TX and RX, the RX receiver can be used with phones that have a 3.5mm port using a TRS to TRRS cable.  
②For phones without a 3.5mm port, you need to use a TRS to Type-C cable for connection.  
③Some brands of phones (e.g., vivo, oppo) require enabling OTO function in the phone's general settings before using external devices.

Q3: The product does not charge when placed in the charging case.  
A3:  
①Check if the protective film on the charging contacts at the back of the product has been removed.  
②Wipe the contacts of the product and the charging case to avoid poor contact caused by dust or moisture.  
③Change the charging case or use a different battery or charging line.

Q4: The product cannot power on.  
A4: Please check if the battery is depleted due to prolonged non-use and connect the charging cable to activate it.

Q5: The product's audio is not being recorded properly.  
A5:  
①Check if the TX is in mode mode. Look at the indicator light/mic interface of the TX transmitter or receiver to see if the TX mode indicator is on the RX mode indicator. If the TX mode is enabled, you need to disable it.  
②Check if the TX device is displayed as connected on the RX mode interface. If the channel is not connected to the receiver, you need to enter the menu and use the Pair Function to re-establish the connection for proper sound recording.

Q6: The product cannot enter the pairing mode.  
A6:  
①The product is set to the pairing mode by default, and it automatically pairs after being powered on. Frequent manual pairing is not recommended.
