Advia Grill Parts Instruction Manual

For Expert Grill XG10-101-002-02 3 Burner Gas Grill

INTRODUCTION

This instruction manual provides detailed guidance for the installation, maintenance, and troubleshooting of your new Advia Grill Parts. This kit is specifically designed as a replacement for the Expert Grill XG10-101-002-02 and GBC2016WRS 3 Burner Gas Grill models. Over time, grill components can wear out or rust, affecting performance. This repair kit is intended to restore your grill to optimal working condition, extending its lifespan and ensuring consistent cooking results.

Perfect Fit For Expert Grill 3 Burner Grills

PRODUCT OVERVIEW

Your Adviace Grill Parts kit includes essential components to refresh your grill's performance:

- **3 Replacement Grill Heat Plates:** These plates are crucial for even heat distribution and protecting the burners from dripping grease.
- **3 Replacement Grill Burner Tubes:** The burner tubes deliver gas to create the flame, ensuring efficient and consistent heat for cooking.

Key Features of Components:

Burner Tubes: Constructed from high-hardness stainless steel, these tubes are designed for durability, sturdiness, and resistance to corrosion and rust, ensuring long-lasting performance.

Heat Plates: Feature an upgraded coating that provides enhanced anti-rust properties and prevents peeling, contributing to their extended lifespan and consistent heat distribution.

Heat Plates (Enamel Process): Manufactured with an enamel production process, these heat plates offer a non-stick surface for oil and are easy to clean, simplifying grill maintenance.

INSTALLATION GUIDE

Replacing your grill's heat plates and burner tubes is a straightforward process that can significantly improve your grill's performance. Always ensure your grill is completely cool and disconnected from its gas supply before beginning any installation or maintenance.

Tools Required:

- Screwdriver (Phillips or Flathead, depending on your grill's fasteners)
- Gloves (recommended for protection)
- Wire brush or scraper (for cleaning old residue)

Step-by-Step Installation:

1. **Preparation:** Ensure the grill is off, cool, and the gas tank is disconnected. Open the grill lid and remove the cooking grates and warming rack.
2. **Remove Old Components:** Carefully lift out the old heat plates. Then, detach the old burner tubes from their connections and remove them from the grill. Note their orientation for reinstallation.
3. **Clean Grill Interior:** Use a wire brush or scraper to remove any accumulated grease, rust, or debris from the grill's firebox. A clean environment ensures optimal performance and longevity of new parts.
4. **Install New Burner Tubes:** Place the new Adviace burner tubes into their designated positions. Ensure they are properly seated and connected to the gas manifold.
5. **Install New Heat Plates:** Position the new Adviace heat plates directly over the burner tubes. Ensure they are securely in place and cover the burners adequately.
6. **Reassemble Grill:** Replace the cooking grates and warming rack. Reconnect the gas tank and perform a leak test before first use.

MAINTENANCE

Proper maintenance of your new Adviace grill parts will ensure their longevity and your grill's continued optimal performance.

- **Regular Cleaning:** After each use, allow the grill to cool. Scrape off any food residue from the cooking grates.

Periodically, remove the heat plates and burner tubes to clean any accumulated grease or debris from the firebox and the components themselves.

- **Heat Plate Care:** The porcelain steel heat plates are designed for easy cleaning. Use a soft cloth or sponge with mild soap and water. Avoid abrasive cleaners or harsh brushes that could damage the enamel coating.
- **Burner Tube Inspection:** Annually, or if you notice uneven flames, inspect the burner tubes for blockages (e.g., from insects or food debris). Use a small wire or pipe cleaner to clear any obstructions from the burner ports.
- **Storage:** If storing your grill for an extended period, ensure all parts are clean and dry to prevent rust or corrosion. Consider covering your grill to protect it from the elements.

TROUBLESHOOTING

Here are some common issues you might encounter and their potential solutions:

Problem	Possible Cause	Solution
Uneven Heating	Blocked burner ports or improperly seated heat plates.	Clean burner ports. Ensure heat plates are correctly positioned over burners.
Burner Not Lighting	Gas flow issue, clogged burner, or igniter problem.	Check gas tank connection and supply. Clean burner ports. Inspect igniter for proper spark.
Excessive Flare-ups	Grease buildup in the firebox or on heat plates.	Thoroughly clean the grill interior and heat plates. Reduce fat content in food.

If you encounter issues not listed here or if the suggested solutions do not resolve the problem, please refer to the original grill's manual or contact customer support.
