## SETUP AND INSTALLATION

---

Follow these steps for a quick and easy installation. A wrench tool is recommended for tightening the 3-way connector.

# INSTALLS IN MINUTES

includes everything you need

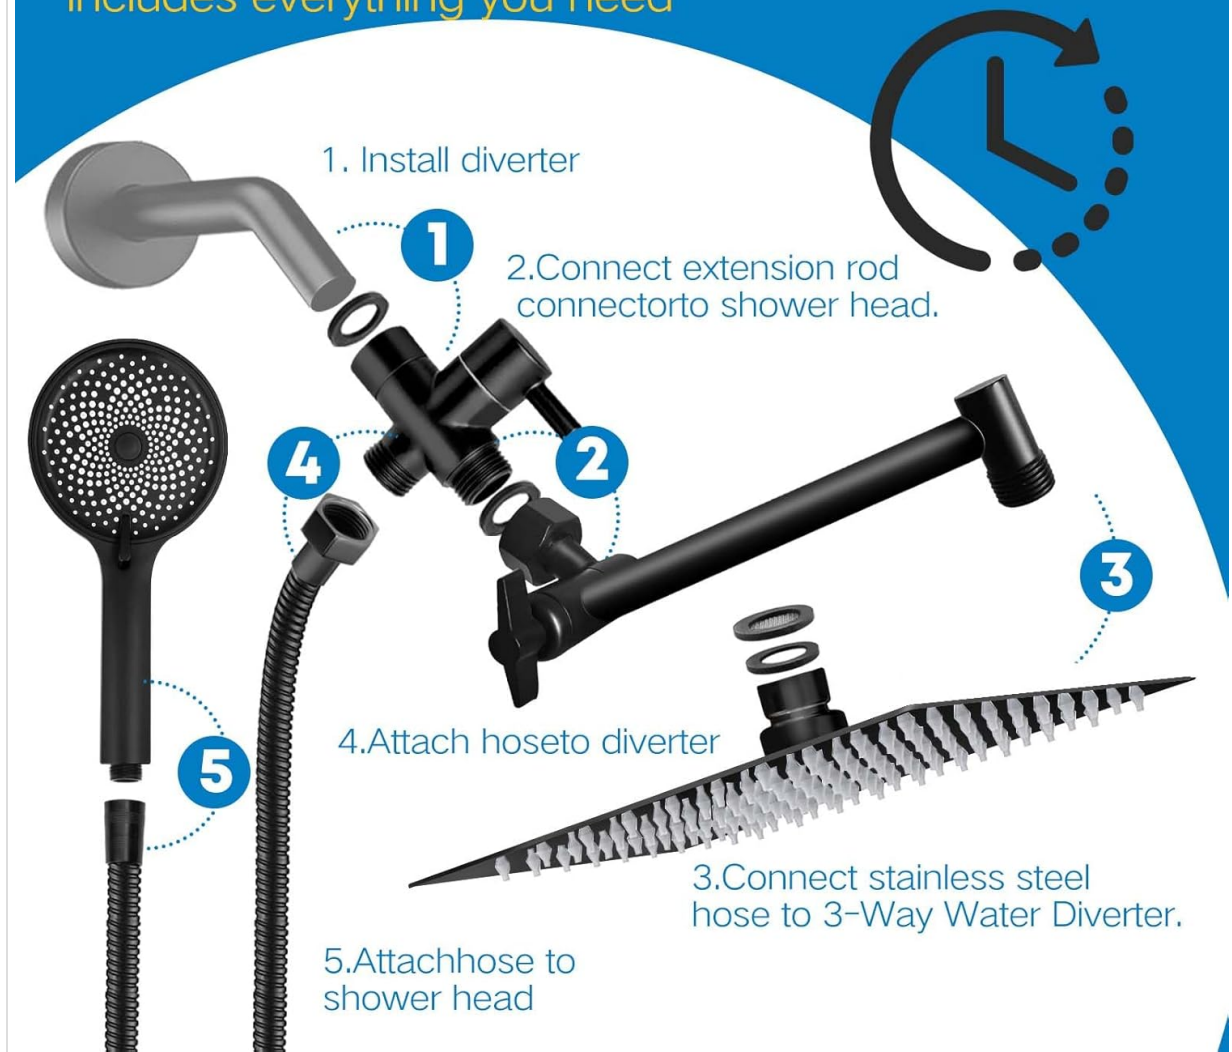

Image: An exploded diagram illustrating the components and their assembly sequence for the shower system.

1. **Prepare the Shower Arm:** Remove your existing shower head. Clean any old sealant or debris from the shower arm threads.
2. **Install the Diverter:** Screw the 3-way water diverter onto the shower arm. Ensure a washer is in place and hand-tighten, then use a wrench to tighten securely.
3. **Attach the Extension Arm:** Connect the adjustable extension arm to the diverter. Ensure a washer is in place and tighten.
4. **Connect Rain Shower Head:** Screw the 8-inch rain shower head onto the extension arm. Ensure a washer is in place and tighten.
5. **Attach Shower Hose to Diverter:** Connect one end of the 5-foot shower hose to the designated outlet on the 3-way diverter. Ensure a washer is in place and tighten.
6. **Connect Handheld Spray:** Attach the handheld spray to the other end of the shower hose. Ensure a washer is in place and tighten.
7. **Mount Handheld Bracket:** Secure the handheld spray wall mount bracket to a desired location on your shower wall.
8. **Test for Leaks:** Turn on the main water supply and check all connections for leaks. If leaks occur, tighten the connections further.

## OPERATING INSTRUCTIONS

### Adjusting Water Flow

The 3-way flow regulator allows you to easily switch between the rain shower head, handheld spray, or a combination of both.

- Turn the knob on the 3-way diverter to select your desired water output.
- Positions typically include: Rain Shower Head Only, Handheld Spray Only, or Both Simultaneously.

# Water Pressure Adjustment

## Adjusting the Extension Arm

The 11-inch adjustable extension arm allows you to position the rain shower head to your preferred height and angle.

- Loosen the adjustment knobs on the extension arm.
- Adjust the arm to raise or lower the shower head, and pivot it to achieve the desired angle.
- Tighten the adjustment knobs firmly to secure the shower head in place.

## MAINTENANCE

### Cleaning the Nozzles

The shower heads feature soft silicone nozzles designed for easy cleaning and to prevent mineral buildup.

- Periodically rub the silicone nozzles with your finger or a soft cloth to dislodge any mineral deposits.
- This helps maintain consistent water flow and prevents clogging.

### General Cleaning

- Clean the shower system regularly with a soft cloth and mild soap and water.
- Rinse thoroughly and dry with a soft cloth to prevent water spots.
- Avoid using abrasive cleaners, ammonia-based products, or harsh chemicals, as these can damage the Matt Black finish.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
Low Water Pressure	Clogged nozzles; water restrictor; low household water pressure.	Clean nozzles by rubbing them. Check if a water restrictor is installed (if applicable, consult local regulations for removal). Verify household water pressure.
Leaks at Connections	Loose connections; missing or damaged washers.	Ensure all connections are tightened securely. Check that all washers are properly seated and undamaged. Replace if necessary.
Diverter Not Switching Properly	Internal debris; worn mechanism.	Flush the system by running water through all outlets. If the issue persists, contact customer support.
