6. Troubleshooting

This section addresses common concerns and provides solutions for your ZINUS Figari Platform Bed Frame.

- **Wobbling or Instability:**

  Ensure all bolts and screws are fully tightened. Over time, connections may loosen, requiring re-tightening. Verify that all frame components are correctly aligned according to the assembly instructions.

- **Mattress Sliding:**

  Some mattresses may slide on the metal slats. Consider using a non-slip mattress pad or rubber grippers placed between the mattress and the slats to prevent movement.

- **Squeaking Noises:**

  Squeaking often indicates loose connections. Re-tighten all bolts. If squeaking persists, apply a small amount of lubricant (e.g., silicone spray) to the joints where metal parts meet.

- **Assembly Difficulties:**

  While designed for easy assembly, some users may find the instructions require careful attention. Double-check part numbers against the manual's illustrations. If a part appears misaligned, re-evaluate the orientation and connection points before forcing it.
