

LOMI Composter

Lomi 1 Electric Composter User Manual

Brand: LOMI | **Model:** Composter

IMPORTANT SAFETY INFORMATION

Please read all safety instructions carefully before operating your Lomi 1 Electric Composter. Failure to do so may result in injury or damage to the appliance.

- Always use Lomi with dry hands to prevent electrical shock.
- Avoid composting sharp objects or materials that may attract pests.
- Keep Lomi clean and dry to prevent mold and bacterial growth.
- Do not compost meat, dairy, or oily foods in excess, as this can affect performance and odor.
- Always unplug Lomi before cleaning or performing maintenance.
- Allow compost to cool before handling.
- Always follow local regulations for composting.

PRODUCT OVERVIEW

The Lomi 1 Electric Composter is an innovative kitchen appliance designed to transform food waste into nutrient-rich natural fertilizer. This smart waste bin offers an eco-friendly solution for reducing household waste and feeding your garden with ease. Its compact design makes it suitable for any countertop.

Lomi features an easy-to-use touch interface for starting, stopping, and monitoring the composting process, helping you significantly reduce your carbon footprint by diverting waste from landfills.

Official Lomi video demonstrating how the composter helps manage food waste efficiently.

SETUP GUIDE

- 1. Unboxing and Placement:** Carefully remove the Lomi 1 from its packaging. Place the unit on a stable, flat, and dry surface, such as a kitchen countertop. Ensure there is adequate ventilation around the unit.

The Lomi 1 is designed for convenient countertop placement.

- 2. Install Carbon Filters:** Lomi uses activated carbon filters to neutralize odors. Locate the filter compartments, typically at the back and top of the unit. Open the compartments and insert the carbon filter bags provided. Ensure they are securely in place.

Adding activated carbon to the filter compartment.

- 3. Insert LomiPod (Optional but Recommended):** For optimal results and accelerated composting, place one LomiPod tablet into the designated slot inside the composter bucket. Add 50ml of water to activate the tablet.

What can go in Lomi?

From fruits and veggies to meat and bread and yard waste to eco-packaging, Lomi can break down most items. The combination of items put into each cycle will affect the end result that is created and how it can be used.

Fruit & Veg

Meat & Dairy

Yard Waste

Bread & Grains

Lomi Approved

Inserting a LomiPod tablet to enhance the composting process.

- 4. Power Connection:** Plug the Lomi 1 into a standard electrical outlet. The power button will illuminate, indicating the unit is ready for use.

OPERATING INSTRUCTIONS

Lomi 1 offers three distinct modes for processing your organic waste:

- Grow Mode:** Ideal for creating nutrient-rich soil amendment for plants. This mode uses lower heat to preserve microorganisms and takes longer (12-24 hours).
- Eco-Express Mode:** For quick breakdown of food waste with low energy consumption, providing the fastest results.
- Lomi Approved Mode:** Designed to break down Lomi-approved bioplastics and compostable commercial goods in addition to food waste.

What Can Go in Lomi? (Do's)

A visual guide to acceptable items for composting in Lomi.

- Fruit and vegetable scraps (including peels, cores, rinds)
- Food leftovers (cooked or uncooked)
- Meat scraps (small amounts, soft bones like fish bones)
- Coffee filters and grounds, tea bags (remove strings)
- Soft peels, nuts, starches
- Dairy products (cheese, yogurt)
- House plants, plants, flowers, and yard trimmings
- Lomi-approved bioplastics and compostable commercial goods

What Cannot Go in Lomi? (Don'ts)

- Hard bones (chicken, beef, pork, lamb)
- Cooking oils, grease, excessive liquids
- Fruit pits (avocados, peaches)
- Soaps, shampoo, and conditioner bars
- Lined bags (chip bags, pet food bags)
- Soiled diapers, baby wipes
- Cigarettes
- Metal, plastic, glass, foil wrap
- Produce netting, styrofoam
- Pet waste
- Alcohol

To Start a Cycle:

1. Fill the internal bucket with your approved food waste. Do not overfill.
2. Close the lid securely.
3. Press the power button to turn on Lomi.
4. Select your desired mode by pressing the mode selection button. The indicator lights will show the active mode.
5. Lomi will begin processing. The cycle duration varies by mode and content.

CARE AND MAINTENANCE

Regular maintenance ensures optimal performance and longevity of your Lomi 1.

Cleaning:

- Always unplug Lomi before cleaning.
- The internal bucket is dishwasher safe for easy cleaning.
- Wipe down the lid and exterior with a damp cloth. Do not submerge the main unit in water.
- Ensure all parts are dry before reassembling and operating.

Filter Replacement:

- Carbon filters should be replaced approximately every 3-6 months, depending on usage, or when odors become noticeable.
- Refer to the setup guide for instructions on accessing and replacing the filters.

TROUBLESHOOTING

If you encounter issues with your Lomi 1, try the following solutions:

Problem	Possible Cause / Solution
Unpleasant Odor During or After Cycle	<ul style="list-style-type: none">◦ Carbon filters may need replacement.◦ Too much meat, dairy, or oily foods were added. Reduce these items in future cycles.◦ Unit or bucket needs cleaning.
Items Not Breaking Down Completely	<ul style="list-style-type: none">◦ Hard bones or other non-approved items were added.◦ Bucket was overfilled.◦ LomiPod was not used or needs to be activated with water.◦ Cycle mode may not be appropriate for the contents (e.g., try Grow Mode for more thorough breakdown).
Unit Not Starting	<ul style="list-style-type: none">◦ Ensure the unit is properly plugged in.◦ Check if the lid is securely closed and locked.◦ Power outage or circuit breaker tripped.

TECHNICAL SPECIFICATIONS

Feature	Detail
Brand	LOMI
Model Number	Composter
Material	Polyurethane
Color	White
Capacity	3 Liters
Product Dimensions (L x W x H)	20" x 16" x 14"
Shape	Oval

Feature	Detail
Item Weight	15 Pounds
UPC	670462801004
Manufacturer	Pela

WARRANTY AND SUPPORT

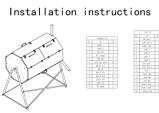

For warranty information, technical support, or to purchase replacement parts and LomiPods, please visit the official LOMI website or contact their customer service department. Keep your purchase receipt for warranty claims.

GreenStep methodology

Summary Report - Lomi CO₂e Impact and Organic Waste Scenarios

Updated July 04, 2022.

Overview

GreenStep has calculated an impact analysis of Pela Lomi over various scenarios. This assessment aims to compare carbon impact from each scenario to identify which scenario generates the lowest impact. The impacts were assessed on a 1 kg CO₂e/Lomi basis, where 'CO₂e' is a metric that represents the amount of greenhouse gases, generated through the below-listed scenarios, and processed using Lomi (involving seven times per week, and 52 weeks per year, each time treats one kg of organic).

Pela's Lomi is an electronic device that helps turn food scraps, organic waste, and certified compostable packaging and home bioplastics into compost (at the push of a button). This report includes the scenarios used to estimate the CO₂e emissions from different scenarios and presents the results.

Analysis of Lomi Earth growth experiment Final Marc Cadotte Read the Report Sustainability 1 v 1707257960 cdn shopify s files 0569 9675 7697 |||

Cadotte Environmental Consulting Lomi Earth indoor growth experiment Prepared for: Daanvir Dhir Briana Maloney, Pela Prepared by: Marc W. Cadotte Summary: This report provides an overview of the growth room pot experiment commissioned by Pela. This experiment was designed to assess how Lomi Earth influenced the growth of the crop species: Barley, Basil, and Pea, and how it influenced measures of soil health. Both potting soil and potting mix were used in the experiment. The treatments included combinations of Lomi potting soil, Lomi potting mix, and Lomi soil amendment. The treatments also included combinations with microbial pots, building agents, and inoculation of naturally occurring soil microflora, and were also compared to compost. For all the species, the Lomi soil amendment treatment resulted in the highest growth. The treatment with the Lomi pots and building agent did not result in higher growth. Further, these Lomi benefits were not apparent in the pot-quality test. There appears to be an important interaction between Lomi pots and a diverse soil microflora that results in greater soil health and enhanced plant growth.

Cadotte Environmental Consulting Lomi Earth farm experiment Prepared for: Daanvir Dhir Briana Maloney, Pela Prepared by: Marc W. Cadotte Summary: This report provides analyses of data provided by Pela from farm trials of Lomi Earth supplement to soil. Here I analyze the resulting soil health and crop plant growth of five soil treatments: 1) no amendment control, 2) standard compost, 3) organic fertilizer, 4) Lomi Earth, and 5) Lomi Blends. I used a variety of statistical methods, including ANOVA, Tukey HSD, and linear regression, and visualizations, and for five different crop species: broccoli, cabbage, green leaf lettuce, kale and romaine. I also examined the effect of Lomi Earth on soil health and crop plant growth in terms of mass using linear models. Finally, I examined the suite of soil nutrient and health measures, but because of limited replication, I could not use parametric statistics. Instead, I used a permutation approach to determine the effect of Lomi Earth on soil health and crop plant growth. Overall, the evidence accumulated from these analyses indicates that Lomi Earth was the most effective treatment for increasing plant size and soil health compared against compost and organic fertilizer.

Lomi Earth, Lomi Blends + Lomi Earth, and Synthetic Fertilizer Comparative Life Cycle Analysis

Executive Summary

This Life Cycle Assessment (LCA) is an evaluation of the impacts of organic fertilizers (Lomi Earth and Lomi Blends + Lomi Earth) as compared to a synthetic fertilizer throughout the life cycle from cradle to grave, looking at every stage along the supply chain including raw material extraction, production, transport, use, and end-of-life disposal.

LCA scores are presented per functional unit (FU) of 1 kg of fertilizer plus the packaging. The table below shows the percentage of greenhouse gases (GHG), water, and waste saved by the Lomi Earth and Lomi Blends + Lomi Earth as compared to 1 kg synthetic fertilizers.

1 kg Lomi Earth (with REO) reduces GHG impact by 102%, water by 96%, and waste by 75% as compared to 1 kg synthetic fertilizers.
1 kg Lomi Blends + Lomi Earth (with REO) reduces GHG impact by 52%, water by 82%, and waste by 58% as compared to 1 kg synthetic fertilizers.

Methodology Report

Executive Summary

GreenStep Solutions has prepared Pela's 2022 carbon footprint following the GHG Protocol's Corporate Accounting and Reporting Standard. A carbon footprint is a measurement of the amount of greenhouse gases (CO₂, CH₄, N₂O, HFCs, PFCs, SF₆) released into the atmosphere by a specific activity – in this case, through Pela's operations. A carbon footprint is expressed in tonnes carbon dioxide equivalents (tCO₂e), which signifies the amount of CO₂ which would have the equivalent global warming impact as the other gases emitted by the activity being measured.

In 2022, Pela's carbon footprint totaled **534.02 tCO₂e**. The majority of emissions derive from Scope 3 sources, particularly from the product life cycle data Pela has compiled for its key product lines.

Executive Summary

GreenStep Solutions has prepared Pela's 2021 carbon footprint following the GHG Protocol Corporate Accounting and Reporting Standard. A carbon footprint is a measurement of the amount of greenhouse gases (CO₂, CH₄, N₂O, HFCs, PFCs, SF₆) released into the atmosphere by a specific activity – in this case, through Pela's operations. A carbon footprint is expressed in tonnes of CO₂ equivalent global warming impact as the other gases emitted by the activity being measured.

In 2021, Pela's carbon footprint totalled 3,739.79 tCO₂e. As in 2020, the majority of emissions come from Scope 3 sources, particularly the product life cycle. Data has been compiled for its key processes.

Scope	tCO ₂ e	% of total
Scope 1	15,37	0,41%
Scope 2	1,22	0,03%
Scope 3	3723,19	99,56%
TOTAL	3739,79
