2. SAFETY INFORMATION

- **Read Instructions:** Always read and understand all instructions before assembling or using the bike stand.
- **Proper Assembly:** Ensure all components are correctly assembled and all fasteners are securely tightened. Improper assembly can lead to instability and potential injury.
- **Stable Surface:** Place the bike stand on a flat, level, and stable surface. For enhanced stability, especially in outdoor or high-traffic areas, consider mounting the stand to the floor using the provided hardware.
- **Weight Capacity:** Do not exceed the stand's capacity. This 3-bike stand is designed for three bicycles.
- **Tire Compatibility:** This stand is designed for bikes with 22-28 inch wheels and a maximum tire width of 2.1 inches. Attempting to fit incompatible tires may damage the stand or the bike.

- **Disc Brakes:** When placing bikes with disc brakes, exercise caution to avoid contact between the disc brake rotor and the stand's metal frame, which could cause damage.
- **Children and Pets:** Keep children and pets away from the stand during assembly and ensure bikes are securely placed to prevent accidental tipping.
- **Inspection:** Periodically inspect the stand for loose bolts, damage, or wear. Tighten any loose fasteners and replace damaged parts immediately.

Image 4.1: Visual guide for the assembly steps.

1. **Connect Base Bars:** Take the two long base bars. Slide one end of a base bar into the open end of the other base bar. Ensure the pre-drilled holes align. Secure them together using two hex bolts and nuts. Tighten firmly.
2. **Attach U-shaped Holders:** Position the U-shaped bike holders onto the assembled base bars. Each holder has two mounting points that align with holes on the base bars.
3. **Secure Holders:** Insert hex bolts through the holes on the U-shaped holders and the base bars. Secure each bolt with a nut from the underside. Repeat for all three U-shaped holders.
4. **Final Tightening:** Once all holders are in place, ensure all hex bolts and nuts are tightened securely using a wrench. Do not overtighten.

1. **Position the Stand:** Place the assembled bike stand in its desired location on a flat surface.
2. **Mark Drill Points:** Using the pre-drilled holes on the base bars as a guide, mark the drilling points on the floor.
3. **Drill Holes:** Drill pilot holes into the floor at the marked points. Ensure the drill bit size is appropriate for the provided wall anchors.
4. **Insert Anchors:** Insert the wall anchors into the drilled holes.
5. **Secure Stand:** Align the stand's holes with the inserted anchors. Drive the lag bolts through the stand's base bars and into the anchors, tightening them securely.

5. OPERATING INSTRUCTIONS

Using your WALMANN 3-Bike Floor Stand is simple and efficient for organizing your bicycles.

Image 5.1: Bikes stored in the stand, demonstrating proper usage.

1. **Positioning the Bike:** Roll the front or rear wheel of your bicycle into one of the U-shaped slots. The stand is designed to hold bikes upright by cradling the wheel.
2. **Orientation:** Bikes can be placed facing the same direction or alternating directions (front-to-back) to optimize space, depending on handlebar and pedal clearance.
3. **Secure Placement:** Ensure the bike's wheel is fully seated within the slot for maximum stability. The stand is designed to fit most standard road and mountain bikes with 22-28 inch wheels and a maximum tire width of 2.1 inches.
4. **Disc Brake Awareness:** If your bike has disc brakes, carefully guide the wheel into the slot to prevent the disc rotor from hitting the metal frame of the stand.

6. MAINTENANCE

Regular maintenance will prolong the life and ensure the continued safe operation of your bike stand.

- **Cleaning:** Wipe down the stand periodically with a damp cloth to remove dirt, dust, or debris. For outdoor use, clean more frequently to prevent accumulation of grime.
- **Inspection:** Regularly check all bolts and nuts for tightness. Re-tighten any loose fasteners to maintain structural integrity.
- **Rust Prevention:** The stand features a powder-coated finish for rust resistance. However, for outdoor use, inspect for any chips or scratches in the coating that could expose the metal to moisture. Touch up any exposed areas with rust-inhibiting paint if necessary.
- **Damage Check:** Inspect the steel tubing for any signs of bending, cracking, or other damage. If significant damage is found, discontinue use and consider replacing the affected components or the entire stand.

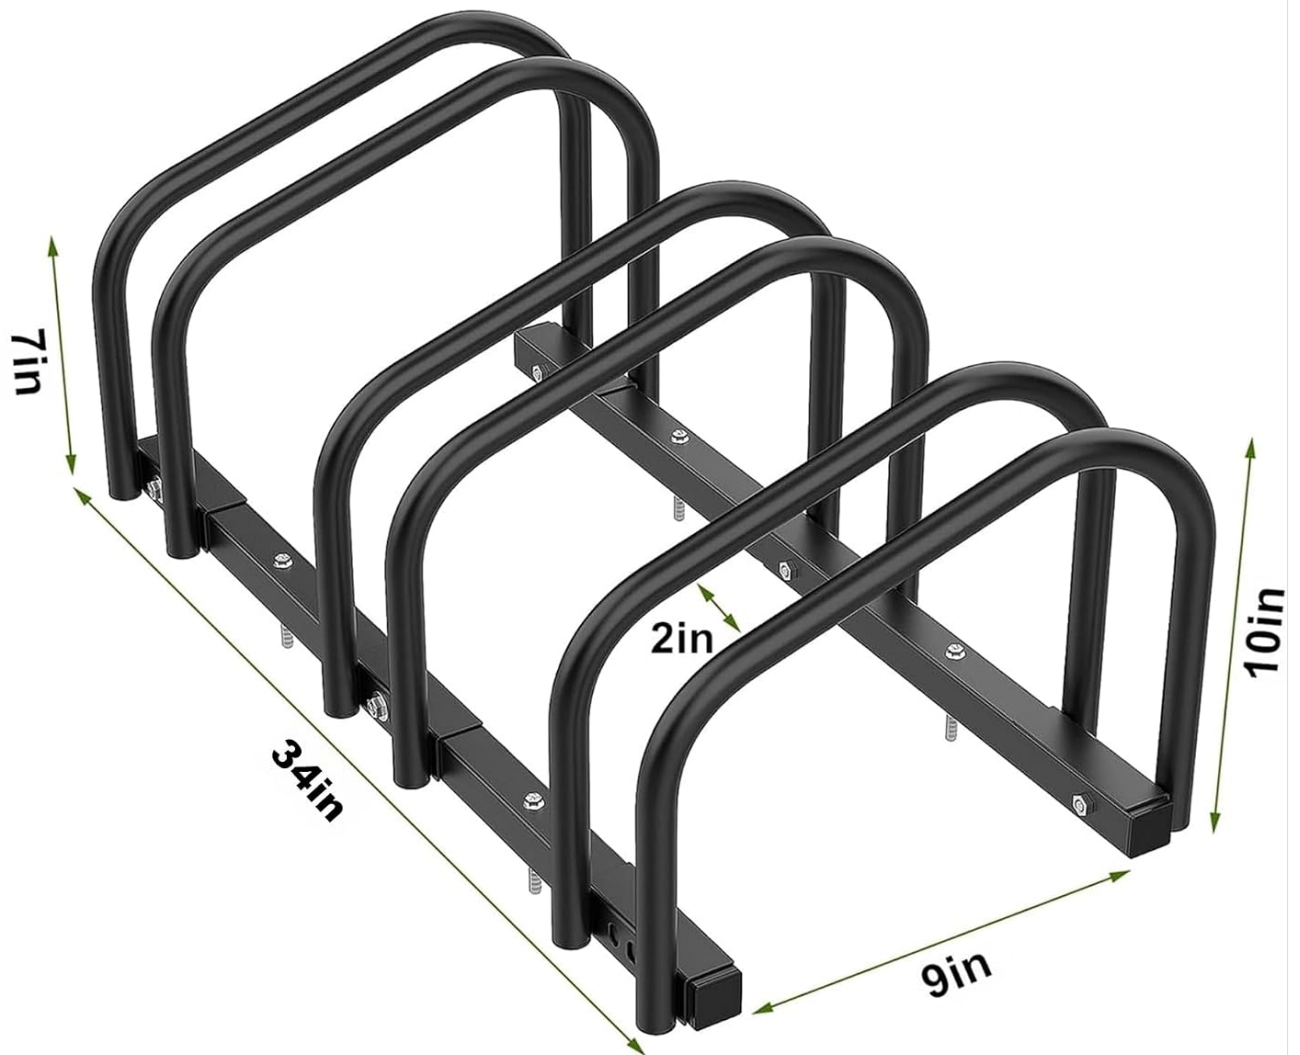

7. TROUBLESHOOTING

This section addresses common issues you might encounter with your bike stand.

Problem	Possible Cause	Solution
Stand wobbles or is unstable.	Loose fasteners; uneven surface; not mounted to floor.	Ensure all hex bolts are tightly secured. Move the stand to a flat, level surface. Consider using the optional floor mounting hardware for increased stability.
Bike does not fit into the slot.	Tire width exceeds 2.1 inches; wheel size is not 22-28 inches.	Verify your bike's tire width and wheel diameter. This stand is designed for tires up to 2.1 inches wide and wheels between 22-28 inches.
Disc brakes rub against the stand.	Improper wheel placement.	Carefully guide the wheel into the slot, ensuring the disc brake rotor clears the stand's frame. Adjust the bike's position slightly if needed.
Rust appears on the stand.	Damage to powder coating; prolonged exposure to moisture.	Clean the rusted area, sand lightly, and apply rust-inhibiting paint. Store indoors or under cover if possible, especially in harsh weather conditions.
