2. PRODUCT FEATURES

- **Thicken Solid Aluminium Alloy:** Constructed from premium solid aluminum alloy with a satin nickel finish, ensuring durability and resistance to rust or oxidation.
- **Enhanced Home Security:** Designed to reinforce inward-swinging doors, providing an additional layer of security against forced entry.

- **Child Proof Safety:** Can be installed out of children's reach to prevent them from opening doors unsupervised, offering child-safe door security.
- **Ventilation and Identification:** Allows the door to be opened a few inches for identification or ventilation while maintaining security.
- **High Resistance:** Features an ultra-thick swing arm and solid lock base capable of resisting up to 600 lbs of force.
- **Steel Ball Positioning:** Unique locking design holds the swing arm in place, preventing it from swinging freely for added security.
- **Elegant Design:** Countersunk hole design contributes to a noble and elegant appearance, complementing home decor.
- **Easy Installation:** Designed for quick and straightforward installation with included screws, suitable for most homeowners.

5. INSTALLATION GUIDE

The CRANACH Swing Bar Door Lock is designed for easy installation. Please follow these steps carefully for optimal security and function.

Important Considerations:

- This lock is compatible with most wooden doors and molding when the door is flush with the door jamb.
- It is designed for **inward-swinging doors only**. Do not attempt to install on outward-swinging doors.
- Ensure there is no significant height difference (greater than 0.4 inches) between the door and the door frame where the lock will be mounted.

Installation Tips

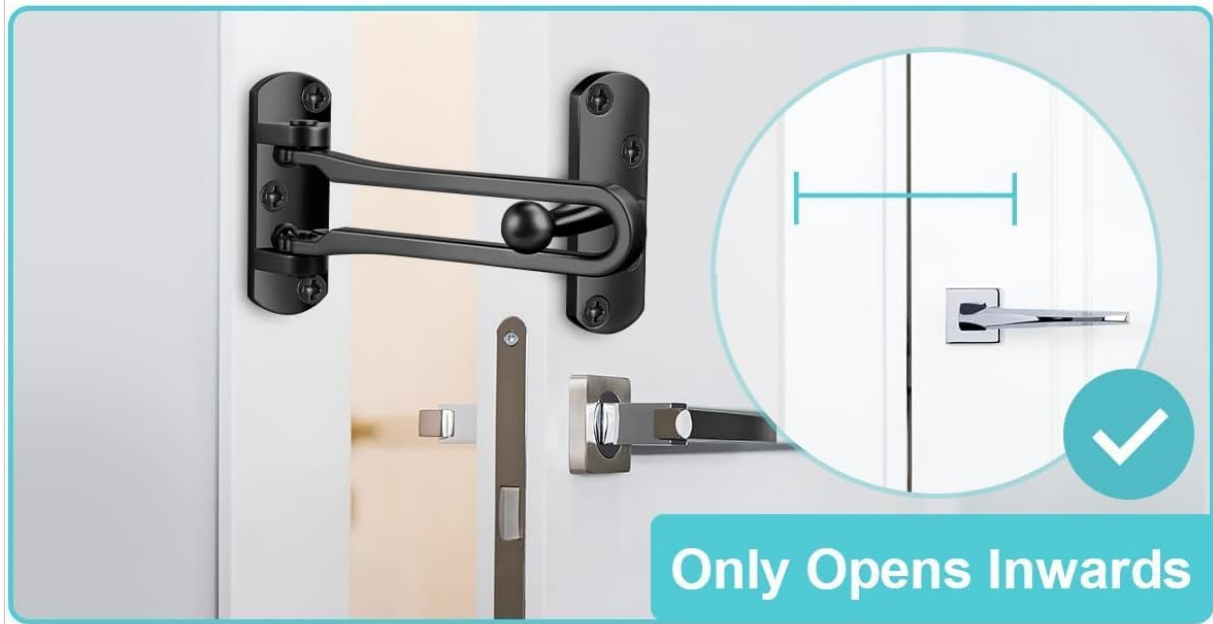

Image 5.1: Key installation tips, emphasizing compatibility with inward-opening doors and proper door frame alignment.

Installation Steps:

1. **Position the Lock:** Place the swing bar door lock on the door frame at the desired height. Ensure it is positioned so that the swing arm can freely extend and engage with the door when closed. For child safety, consider installing it out of a child's reach.
2. **Mark Screw Holes:** Using a pencil, mark the locations for the mounting screws through the holes on the lock's base plates.
3. **Drill Pilot Holes:** Using a drill, create pilot holes at the marked locations. Ensure the drill bit size is appropriate for the included screws to prevent wood splitting.
4. **Secure the Lock:** Align the lock with the pilot holes and use the provided screws to firmly attach the lock to the door frame. Ensure all screws are tightened securely.

6. OPERATING INSTRUCTIONS

Using your CRANACH Swing Bar Door Lock is straightforward:

- **To Lock:** Close the door completely. Swing the bar arm over the door and slide the ball end into the receiving slot on the base plate. The steel ball positioning feature will hold the arm securely in place.
- **To Unlock:** From the inside, simply swing the bar arm away from the door. The lock can be easily disengaged with a simple motion.
- **Security Peek/Ventilation:** When the door is closed, you can partially open it a few inches while the swing bar is engaged. This allows for identification of visitors or ventilation without fully compromising security.

Child Safety Usage:

When installed at a height inaccessible to children, the lock acts as an effective child-proof safety device, preventing toddlers from opening doors on their own.

7. CARE AND MAINTENANCE

To ensure the longevity and optimal performance of your CRANACH Swing Bar Door Lock, follow these simple maintenance guidelines:

- **Cleaning:** Wipe the lock regularly with a soft, damp cloth to remove dust and grime. Avoid using abrasive cleaners or harsh chemicals, as these can damage the finish.
- **Lubrication:** Periodically apply a small amount of silicone-based lubricant to the pivot points of the swing arm to ensure smooth operation.
- **Screw Tightness:** Occasionally check the mounting screws to ensure they remain tight. Retighten if necessary to maintain secure installation.
- **Inspection:** Inspect the lock for any signs of wear or damage. If any components appear damaged or loose, contact customer support for assistance.

8. TROUBLESHOOTING

If you encounter any issues with your CRANACH Swing Bar Door Lock, refer to the following common problems and solutions:

Problem	Solution
Lock feels loose after installation.	Ensure all mounting screws are fully tightened. If the issue persists, check if the pilot holes were drilled too large or if the wood is stripped. Consider using larger screws or wood anchors if necessary.
Swing arm does not move smoothly.	Apply a small amount of silicone-based lubricant to the pivot points of the swing arm. Ensure no debris is obstructing the movement.
Lock does not engage properly.	Verify that the door is fully closed and flush with the door jamb. Check if the lock was installed at the correct height and alignment. The steel ball positioning should click into place.
Cannot install on my door.	Confirm your door is inward-swinging and that there is no significant height difference between the door and the frame (max 0.4 inches). This lock is not suitable for outward-swinging doors.
