## 3. Setup and Installation

---

### 3.1 Unpacking

Carefully remove the battery from its packaging. Inspect the battery for any signs of damage during transit. If any damage is observed, do not proceed with installation and contact your supplier.

### 3.2 Installation Steps

1. Ensure the equipment where the battery will be installed is turned off and disconnected from any power source.
2. Identify the existing battery (if any) and its terminals. Note the positive (+) and negative (-) connections.
3. Carefully disconnect the negative (-) terminal first, followed by the positive (+) terminal from the old battery.
4. Remove the old battery.
5. Place the Technical Precision Replacement MT26 Battery into the battery compartment, ensuring it is securely seated.
6. Connect the positive (+) terminal of the new battery first, then connect the negative (-) terminal. Ensure all connections are tight and secure.
7. Verify that the battery is correctly installed and all connections are firm.

## 4. Operating Instructions

### 4.1 Initial Charge

Although the battery may come with some charge, it is recommended to fully charge the battery before its

first use to ensure optimal performance and longevity. Refer to your equipment's manual for specific charging procedures and recommended charger types.

## 4.2 Regular Use

This is a 12-volt rechargeable battery. Use it in applications compatible with its voltage and capacity. Avoid deep discharges whenever possible, as this can reduce battery life. Recharge the battery promptly after use or when its charge level is low.

## 5. Maintenance

### 5.1 Cleaning

Keep the battery terminals and casing clean and free from dirt, dust, and corrosion. Use a dry cloth to wipe down the battery. If corrosion is present on the terminals, carefully clean it with a wire brush and a mixture of baking soda and water, then rinse with clean water and dry thoroughly.

### 5.2 Storage

If the battery will not be used for an extended period, store it in a cool, dry place. It is advisable to fully charge the battery before storage and to periodically check its charge level, recharging it every 3-6 months to prevent deep discharge and maintain its health.

### 5.3 Terminal Connections

Periodically check that the terminal connections remain tight and free from corrosion to ensure efficient power transfer.

## 6. Troubleshooting

Problem	Possible Cause	Solution
Battery not holding charge	Improper charging, old battery, faulty charger, deep discharge	Ensure proper charging procedure. Test with a known good charger. If battery is old, consider replacement. Avoid deep discharges.
Equipment not powering on	Battery not charged, loose connections, faulty equipment	Check battery charge. Verify terminal connections are secure. Test battery in another compatible device if possible. Consult equipment manual.
Battery terminals corroded	Exposure to moisture, lack of maintenance	Clean terminals as described in Section 5.1. Ensure battery is stored in a dry environment.

If troubleshooting steps do not resolve the issue, contact Technical Precision customer support or a qualified technician.
