OPERATING INSTRUCTIONS

Follow these steps to safely remove your vehicle's OEM radio unit:

1. Step 1: Insert the Keys

Locate the four thin slots on the left and right sides of your radio unit. Insert one key into each of these four slots. Ensure the curved edge of the keys with the notch faces inwards towards the radio. Slide them all the way in until they "lock" into place.

2. Step 2: Release and Pull Out the Radio

Once all four keys are inserted and locked, gently pull on all four keys simultaneously. This action releases the radio's retaining clips. Carefully pull the radio unit out of the dashboard.

3. Step 3: Remove the Keys

After the radio is removed, press and hold the body card (the side of the radio unit) while pulling out each key. This ensures the keys are released without damaging the radio's internal clips.

TROUBLESHOOTING

If the radio does not release easily after inserting the keys:

- Ensure all four keys are fully inserted and have clicked into place.
- Try gently wiggling two keys at once on each side of the radio. This can help to disengage stubborn retaining clips.
- When pulling, apply even pressure to all four keys. If you experience discomfort, consider wearing gloves to protect your fingers.
- Avoid excessive force, as this may damage the radio unit or the dashboard.

CARE AND MAINTENANCE

These radio removal tools require minimal maintenance:

- After each use, wipe the tools clean with a dry cloth to remove any dust or debris.
- Store the tools in a dry place to prevent rust or corrosion.
- Avoid bending or misusing the tools, as this can compromise their effectiveness.
