7. TROUBLESHOOTING

If you experience issues with your Sony SA-SW3 Wireless Subwoofer, refer to the following common solutions:

| Problem | Possible Cause / Solution |
|----------------------------|--|
| No power | Ensure the power cord is securely connected to both the subwoofer and a working wall outlet. Check if the soundbar is powered on. |
| No sound from subwoofer | Verify that the subwoofer is successfully paired with your soundbar. Check the soundbar's settings to ensure the subwoofer output is enabled and the volume is not muted or set too low. |
| Poor or distorted bass | Adjust the bass level settings on your soundbar. Ensure the subwoofer is placed on a stable surface and not vibrating against other objects. Check for any obstructions around the subwoofer's port. |
| Wireless connection issues | Move the subwoofer closer to the soundbar. Avoid placing the subwoofer near devices that emit strong radio waves (e.g., microwave ovens, Wi-Fi routers). Try re-pairing the subwoofer with the soundbar. |
