4. Operating (Building) Instructions

5. Maintenance

To maintain the appearance and integrity of your nanoblock Dialga model, keep it in a clean, dry environment away from direct sunlight and extreme temperatures. Dust can be removed gently with a soft brush or a can of compressed air. Avoid using harsh chemicals or abrasive materials for cleaning. Due to the micro-sized nature of the blocks, the model can be delicate. Handle it with care, especially when moving or adjusting its position, to prevent pieces from detaching.

6. Troubleshooting

- **Model Instability:** If certain sections, such as legs or wings, feel unstable or prone to falling apart, re-examine the connections. Ensure all blocks are firmly pressed into place. For persistent issues, some builders have found success using a small amount of plastic model glue on critical, non-articulated connections to enhance stability.
- **Missing Pieces:** While nanoblock kits typically include extra pieces, if you find a critical piece missing, double-check your workspace thoroughly. If a piece is genuinely missing and prevents completion, contact customer support (see Section 8).
- **Difficulty with Small Pieces:** The small size of nanoblocks can be challenging. Using tweezers can significantly improve precision and ease of assembly. Take frequent breaks to avoid eye strain and

maintain focus.
