5.2. Making Milk-Based Beverages (LatteCrema System)

The LatteCrema System ensures perfect milk frothing. It achieves an optimal extraction temperature of 60-65°C for milk, which is when milk is at its sweetest, and a delicious milk-to-foam ratio of 2:3. The size of the foam can be adjusted to suit your preference.

5.2.1. My Latte Function

The My Latte function allows you to customize the amount of milk. The machine's sensor detects the milk volume in the container and froths only the amount you pour, creating a personalized milk-based drink.

6.1. Cleaning the Brewing Unit and Removable Parts
