SKMEI SKMEI-9271-Red-F

SKMEI Mechanical Wrist Watch User Manual

Model: SKMEI-9271-Red-F

Brand: SKMEI

INTRODUCTION

This manual provides essential information for the proper setup, operation, and maintenance of your SKMEI Mechanical Wrist Watch. Designed with a unique skeleton dial and automatic movement, this timepiece combines classic aesthetics with reliable functionality. Please read this manual thoroughly to ensure optimal performance and longevity of your watch.

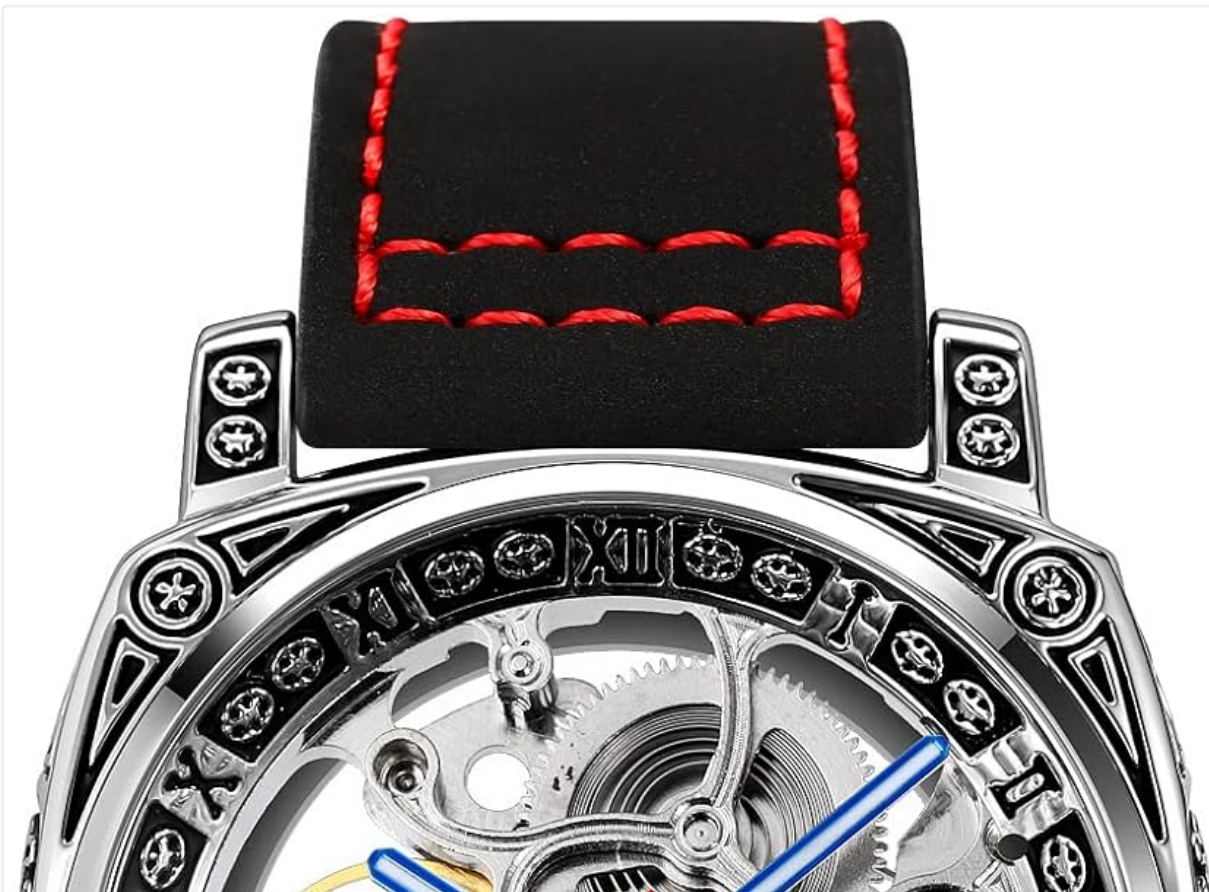

Figure 1: SKMEI Mechanical Wrist Watch (Red variant)

The SKMEI Mechanical Wrist Watch features a distinctive silver skeleton dial, allowing a clear view of its intricate automatic movement. It is complemented by a durable leather band with contrasting red stitching, and a robust zinc alloy case with detailed carvings.

SETUP

Initial Winding and Time Setting

Your SKMEI Mechanical Wrist Watch is powered by an automatic movement, which means it winds itself with the motion of your wrist. However, for initial setup or if the watch has stopped due to lack of wear, manual winding is required.

1. **Manual Winding:** To initiate power, turn the crown (the knob on the side of the watch) clockwise approximately 20-30 times while it is in its normal, pushed-in position. You will feel a slight resistance as the mainspring winds. Do not overwind.

2. Setting the Time:

- Pull the crown out to the first position.
- Turn the crown clockwise or counter-clockwise to set the hour and minute hands to the correct time.
- Once the time is set, push the crown back into its normal position to start the watch.

Figure 2: Watch crown for winding and setting time

The crown is used for both manual winding and setting the time. Ensure it is fully pushed in after setting to maintain water resistance.

OPERATING INSTRUCTIONS

Automatic Movement

Your SKMEI watch features an automatic mechanical movement. This means it does not require a battery. The watch is powered by the natural motion of your arm as you wear it. A rotor inside the watch spins with your movement, winding the mainspring and storing energy.

- **Daily Wear:** For consistent timekeeping, it is recommended to wear the watch for at least 8-10 hours daily.
- **Power Reserve:** If fully wound, the watch typically has a power reserve of approximately 36-40 hours. If not worn for an extended period, it may stop and require manual winding as described in the "Setup" section.

Video 1: Official SKMEI Wrist Watch for Men product video, demonstrating the automatic movement and various angles of the watch.

This video provides a visual overview of the watch's features, including its automatic movement and design details.

MAINTENANCE

Care and Longevity

- **Cleaning:** Wipe the watch case and crystal regularly with a soft, dry, lint-free cloth. For the leather band, use a slightly damp cloth and then dry immediately. Avoid harsh chemicals or abrasive materials.
- **Water Resistance:** This watch has a water resistance rating of 30 meters (3ATM). This means it is suitable for daily use, splash/rain resistant, but **not** suitable for showering, bathing, swimming, snorkeling, or any water-related work. Avoid pressing the crown or operating the watch underwater.
- **Temperature Extremes:** Avoid exposing your watch to extreme temperatures (hot or cold) or sudden temperature changes, as this can affect the movement and seals.
- **Magnetic Fields:** Keep the watch away from strong magnetic fields (e.g., speakers, refrigerators, mobile phones) as they can affect the accuracy of the mechanical movement.
- **Storage:** When not wearing the watch for extended periods, store it in a cool, dry place, preferably in its original box or a watch case to protect it from dust and scratches.

Figure 3: View of the watch's automatic movement through the transparent case back.

The transparent case back allows observation of the watch's intricate mechanical components, emphasizing the importance of proper care to maintain its functionality.

TROUBLESHOOTING

Common Issues and Solutions

Problem	Possible Cause	Solution
Watch stops or runs intermittently.	Insufficient power reserve; not worn enough or not manually wound.	Manually wind the watch by turning the crown clockwise 20-30 times. Wear the watch regularly for at least 8-10 hours daily.

Problem	Possible Cause	Solution
Watch runs too fast or too slow.	Exposure to strong magnetic fields; impact; need for regulation.	Keep watch away from magnets. If accuracy issues persist after avoiding magnetic fields, professional regulation may be required.
Condensation inside the crystal.	Exposure to extreme temperature changes or water ingress.	If minor, it may dissipate. If persistent or significant, seek professional service immediately to prevent damage to the movement. Avoid further water exposure.
Crown is difficult to pull out or turn.	Dirt accumulation; internal mechanism issue.	Do not force the crown. Clean around the crown gently. If the issue persists, professional inspection is recommended.

SPECIFICATIONS

Detailed specifications for your SKMEI Mechanical Wrist Watch:

- **Model Number:** SKMEI-9271-Red-F
- **Movement:** Automatic Mechanical
- **Case Material:** Zinc Alloy
- **Band Material:** Leather
- **Buckle Material:** Stainless Steel
- **Crystal Material:** Glass
- **Water Resistance:** 30M (3ATM)
- **Dial Width:** 42mm (1.65 inches)
- **Case Thickness:** 15mm (0.59 inches)
- **Band Width:** 22mm
- **Watch Length (including case):** 255mm (10.04 inches)
- **Item Weight:** Approximately 5.29 ounces
- **Clasp Type:** Buckle

BRAND: SKMEI

MODEL: 9271

WEIGHT: 77g

MOV'T: Automatic

CRYSTAL: Glass

CASE: Zinc alloy

BAND: Leather

BUCKLE: Stainless steel

W / P : 30M

FUNCTION: Time

Dial width: 42mm

Dial thickness: 15mm

Band Width: 22mm

Watch length: 255mm
