3. SETUP

3.1 Unpacking

Carefully remove all packaging materials, including tape and protective films. Inspect the appliance for any shipping damage. Report any damage to your retailer immediately.

3.2 Placement

Choose a location that is dry, well-ventilated, and away from direct sunlight or heat sources (e.g., ovens, radiators). Ensure there is at least 10 cm (4 inches) of space around the back and sides of the appliance for proper ventilation. The appliance should be placed on a firm, level surface to prevent vibrations and ensure efficient operation.

Adjust the leveling feet at the bottom of the appliance to ensure it is stable and level. This helps prevent noise and ensures the door seals properly.

Before first use, clean the interior and exterior of the appliance with a soft cloth and a mild detergent solution. Rinse with clean water and dry thoroughly.

3.5 Power Connection

Plug the appliance into a dedicated 220V, 50/60Hz grounded electrical outlet. Allow the appliance to stand for at least 2-4 hours before plugging it in to allow refrigerants to settle.

4. OPERATING INSTRUCTIONS

4.1 Temperature Control

The appliance features an adjustable temperature control system. Locate the control panel, typically inside the unit or on the door. Use the controls to set your desired temperature. For freezing, set to a lower temperature (e.g., -18°C to -24°C). For refrigeration, set to a higher temperature (e.g., 2°C to 8°C).

4.2 Fast Cooling Function

To rapidly cool or freeze newly added items, activate the Fast Cooling function. This feature temporarily lowers the temperature quickly. Refer to the control panel for specific instructions on activating and deactivating this mode. It is recommended to use this function for a limited time to save energy.

4.3 Converting Between Freezer and Refrigerator Modes

This versatile appliance can be switched between freezer and refrigerator modes. Consult the control panel or specific instructions provided with your unit for the exact procedure. Typically, this involves selecting the desired mode (Freezer or Refrigerator) and adjusting the temperature accordingly. Allow several hours for the appliance to reach the new set temperature after conversion.

4.4 LED Lighting

The interior of the appliance is equipped with energy-efficient LED lighting, which illuminates when the door is opened. If the LED light is not functioning, please contact customer support.

4.5 Food Storage Tips

- Store food in sealed containers to prevent odor transfer and maintain freshness.
- Avoid overloading the shelves to allow for proper air circulation.
- For optimal energy efficiency, minimize door openings and close the door promptly.

5. MAINTENANCE

5.1 Cleaning the Interior

Regularly clean the interior with a solution of mild detergent and warm water. Avoid abrasive cleaners or sharp objects that could damage surfaces. Remove shelves and drawers for thorough cleaning. Dry completely before returning food items.

5.2 Cleaning the Exterior

Wipe the exterior surfaces with a soft cloth dampened with water and a mild detergent. For the silver finish, use a non-abrasive cleaner specifically designed for stainless steel or similar surfaces, if applicable. Do not spray water directly onto the appliance.

5.3 Door Seal Maintenance

Inspect the door seals regularly for cracks or damage. Clean them with warm water and a mild detergent to ensure a tight seal, which is crucial for energy efficiency. A damaged seal should be replaced by a qualified technician.

5.4 Defrosting

While this model features efficient cooling, if ice buildup occurs in freezer mode, manual defrosting may be required. Turn off the appliance, remove all food, and allow the ice to melt naturally. Do not use sharp objects to remove ice. Once defrosted, clean and dry the interior before restarting.
