Aquatop QPH-300

Aquatop 300W Quartz Platinum Heater (QPH-300) Instruction Manual

Brand: Aquatop | Model: QPH-300

INTRODUCTION

The Aquatop 300W Quartz Platinum Heater (QPH-300) is designed to provide stable and consistent water temperatures for your aquarium. This fully submersible heater features a shatter-resistant quartz glass construction, automatic temperature control, and is suitable for both freshwater and saltwater environments. This manual provides essential information for safe installation, operation, and maintenance of your heater.

SAFETY INSTRUCTIONS

- Always ensure the heater is fully submerged in water before plugging it into a power outlet. Operating the heater out of water can cause damage to the unit and pose a safety risk.
- Unplug the heater from the power outlet before performing any maintenance, cleaning, or handling the unit.
- Carefully examine the heater for any signs of damage (e.g., cracked glass, frayed cord) before installation and regular use. Do not use a damaged heater.
- Ensure the power cord is positioned to prevent water from dripping onto the outlet. Create a 'drip loop' with the cord.
- This heater is designed for household use only.

PACKAGE CONTENTS

- 1 x Aquatop 300W Quartz Platinum Heater (QPH-300)
- 2 x Suction Cups for mounting
- 1 x Instruction Manual

PREMIUM QUARTZ GLASS HEATER

AquaTop's Platinum Quartz Glass Heaters are fully submersible and suitable for freshwater or saltwater applications. With an easy to use, adjustable temperature setting knob, these heaters are capable of heating your water quickly and accurately from 68-93 degrees Fahrenheit. The fully submersible feature and strong quartz glass design allows for more flexibility in placement.

FEATURES:

- Fully Submersible
- Temp Range: 68-93° Fahrenheit
- Shatter-Resistant Quartz Glass
- Auto Off at Target Temperature
- Heats Quickly & Accurately
- Suction Cup Quick Installation
- Ideal for Nano Aquariums

SPECIFICATIONS

MODEL	POWER	LENGTH	TANK SIZE

INSTALLATION

1. Attach the provided suction cups to the heater body. Ensure they are securely fastened.
2. Place the heater fully submerged in your aquarium. It can be positioned vertically or horizontally, but ensure it is not buried in the substrate.
3. Secure the heater to the aquarium glass using the suction cups. Ensure there is adequate water flow around the heater for even heat distribution.
4. Once the heater is properly positioned and fully submerged, plug the power cord into a suitable electrical outlet.

Video: This video demonstrates the unboxing, fully submersible design, durable suction cups, and easy temperature setting of the Aquatop HTG Heater, which shares similar features with the QPH-300 model.

OPERATING INSTRUCTIONS

1. After installation, allow the heater to acclimate to the water temperature for at least 15 minutes before plugging it in.
2. Adjust the red temperature setting knob located at the top of the heater to your desired temperature. The heater has a temperature range of 68-93 degrees Fahrenheit (20-34 degrees Celsius).
3. The heater features an automatic on/off function. It will heat the water until the set temperature is reached, then automatically turn off. It will reactivate when the water temperature drops below the set point.
4. An indicator light on the heater will illuminate when the heating element is active.

MAINTENANCE

- Regularly check the heater for any mineral buildup or algae growth.
- To clean, unplug the heater and remove it from the aquarium. Gently wipe the glass tube with a soft cloth or sponge. Avoid using harsh chemicals or abrasive materials.
- Ensure the heater is completely dry before re-installing it into the aquarium.
- Always allow the heater to cool down for at least 15 minutes after unplugging before removing it from the water.

TROUBLESHOOTING

- **Heater not heating:** Ensure the power plug is inserted securely. Check that the temperature setting is set on the desired temperature. Verify the heater is receiving power.
- **Incorrect temperature reading:** Double-check the thermometer setting on the heater. Use a separate thermometer to confirm the actual water temperature. If there's a significant discrepancy, recalibrate the heater or consider replacing it.
- **Heater is not turning on/off:** If the heater shows any sign of abnormal operation, unplug the power and remove the heater from the water after 15 minutes. Carefully examine the heater for any damage.
- **Water temperature too high/low:** If the room temperature is cooler than the heater's set temperature by 10 degrees or more, or if the tank size is at the higher end of the recommended range for the wattage, a higher wattage heater may be needed.

SPECIFICATIONS

Feature	Detail
Model	QPH-300 (39001906)
Power	300W
Tank Size Application	55-100 Gallons
Adjustable Temperature Range	68-93°F (20-34°C)
