MAINTENANCE

To ensure the longevity and safety of your bunk bed, follow these maintenance tips:

- **Cleaning:** Wipe down the metal frame with a soft, damp cloth. Avoid abrasive cleaners or harsh chemicals that could damage the finish.
- **Tighten Connections:** Periodically check all bolts and screws and re-tighten them as needed to maintain stability and prevent wobbling. This is especially important after initial assembly and during regular use.
- **Inspect Slats:** Ensure all metal slats are properly seated and not bent or damaged.
- **Floor Protection:** The bed posts are equipped with rubber pads to prevent scratches on your floor. Ensure these pads remain intact.

TROUBLESHOOTING

If you encounter any issues with your HomJoones bunk bed, consider the following common solutions:

- **Wobbling or Instability:**

This is most commonly caused by loose connections. Carefully re-tighten all bolts and screws on the entire frame. Ensure the bed is on a level surface.

- **Squeaking Noises:**

While the bed is designed for noise reduction, persistent squeaking may indicate loose connections or friction points. Re-tighten all hardware. If the issue persists, inspect the silent cotton pads for proper placement.

- **Parts Missing or Damaged:**

If you find any parts missing or damaged upon unboxing, please contact customer support immediately with your purchase details. Do not attempt to assemble the bed with missing or damaged components.

- **Difficulty Assembling:**

Ensure you are following the provided assembly instructions step-by-step. Verify that all parts are oriented correctly. Sometimes, parts may seem not to fit if not aligned perfectly before tightening.
