## SETUP AND INSTALLATION

Follow these steps carefully to install your ID-COOLING IS-47-XT CPU cooler. Ensure your system is powered off and unplugged before beginning installation.

### 1. Prepare the Motherboard

1. Place the appropriate backplate (if required for your socket type) on the rear of the motherboard, aligning the holes with the CPU socket mounting holes.
2. Insert the standoffs through the mounting holes from the front side of the motherboard, securing them to the backplate.

### 2. Apply Thermal Paste

1. Clean the surface of your CPU and the cooler's copper base with isopropyl alcohol to remove any dust or residue.
2. Apply a small, pea-sized amount of the included thermal paste to the center of the CPU's Integrated Heat Spreader (IHS). Do not spread it; the pressure from the cooler will distribute it evenly.

### 3. Mount the Cooler

1. Carefully place the IS-47-XT cooler onto the CPU, aligning the mounting holes on the cooler's bracket with the standoffs on the motherboard.
2. Secure the cooler using the provided screws. Tighten them in a diagonal pattern (e.g., top-left, bottom-right, top-right, bottom-left) until snug. Do not overtighten.
3. Connect the 4-pin PWM fan cable from the cooler to the CPU\_FAN header on your motherboard.

## Mounting Orientation

The IS-47-XT cooler can be mounted in two different orientations to optimize airflow within your case, depending on your system's configuration. Consider the direction of your case fans to ensure the cooler's fan is assisting the overall airflow.

## OPERATING INSTRUCTIONS

Once installed, the ID-COOLING IS-47-XT operates automatically to maintain optimal CPU temperatures.

### PWM Fan Control

The 92x92x15mm fan is a Pulse Width Modulation (PWM) fan. This means its speed is automatically controlled by your motherboard based on the CPU's temperature. This dynamic control ensures efficient cooling when needed and quiet operation during lighter loads.

### Airflow and Performance

The fan is designed to push air down through the heatsink fins, effectively dissipating heat from the copper base and heat pipes. This strong airflow and air pressure ensure that heat is quickly removed from the CPU, maintaining stable operating temperatures.

## MAINTENANCE

Regular maintenance helps ensure the longevity and optimal performance of your CPU cooler.

### Dust Cleaning

- Periodically inspect the heatsink fins and fan blades for dust accumulation.
- Use compressed air to blow dust out of the heatsink fins. Hold the fan blades gently to prevent them from spinning excessively during cleaning, which can damage the fan bearings.
- For stubborn dust, a soft brush or cotton swab can be used carefully.

### Thermal Paste Reapplication

While modern thermal pastes have a long lifespan, reapplication may be beneficial after several years or if you notice a significant increase in CPU temperatures. This involves carefully removing the cooler, cleaning off old thermal paste from both the CPU and cooler base, and applying new thermal paste before re-mounting.

## TROUBLESHOOTING

If you encounter issues with your ID-COOLING IS-47-XT cooler, refer to the following common problems and solutions.

## High CPU Temperatures

- Check Mounting Pressure:** Ensure the cooler is securely mounted and evenly tightened. Uneven pressure can lead to poor contact with the CPU.
- Verify Thermal Paste Application:** Confirm that thermal paste was applied correctly and is evenly spread between the CPU and cooler base. Reapply if necessary.
- Inspect Fan Operation:** Ensure the fan is spinning freely and connected to the CPU\_FAN header. Check for any obstructions.
- Case Airflow:** Poor case ventilation can trap heat. Ensure your PC case has adequate intake and exhaust fans.
- CPU Power Consumption:** This cooler is designed for CPUs with lower thermal design power (TDP). For optimal performance, it is recommended for CPUs with a TDP of 65W or lower. CPUs with higher power consumption (e.g., 90W or above) may experience higher temperatures, especially under heavy load.

## Excessive Fan Noise

- Dust Accumulation:** Clean the fan blades and heatsink fins as described in the Maintenance section.
- Fan Speed Settings:** Check your motherboard's BIOS/UEFI settings for fan control. Adjust the fan curve to a quieter profile if temperatures allow.
- Obstructions:** Ensure no cables or other components are touching the fan blades.
