3. Specifications

Brand	CALANDIS
Model Number	CLTIN65011216
Material	Artificial Feather
Length (approx.)	17.8 cm / 7.0 inch
Item Weight	10 g (0.01 Kilograms)
Dimensions (L x W x H)	12 x 8 x 13 Centimeters
Color	As Per Image (Purple with multi-color feathers)
Target Species	Fish (Trout, Streamer, Salmon, etc.)

Country of Origin	Hong Kong

4. Setup and Preparation

Before using your CALANDIS fishing fly, ensure your fishing rod, reel, and line are appropriate for fly fishing. This fly is designed to be used with a fly fishing setup.

1. **Inspect the Fly:** Carefully examine the fly for any damage to the feathers or hook. Ensure the hook is sharp and free of burrs.
2. **Attach to Leader:** Tie the fly to the end of your leader using a strong, reliable fishing knot suitable for fly fishing, such as a Clinch Knot or an Improved Clinch Knot. Ensure the knot is secure and the fly hangs naturally.
3. **Check Line:** Verify that your leader and tippet are of appropriate strength and length for the target species and fishing conditions.

Image 4.1: The fishing fly viewed from the side, illustrating its full length and the flow of its artificial feathers, which contribute to its realistic movement in water.

5. Operating Instructions (Fishing Techniques)

The effectiveness of the CALANDIS streamer fly depends on proper presentation and retrieval techniques. This fly is designed to mimic baitfish or larger insects.

- **Casting:** Use standard fly casting techniques to present the fly to your target area. Aim for areas where fish are likely to be feeding, such as near structures, drop-offs, or current seams.
- **Retrieval:**
  - **Strip Retrieve:** After casting, allow the fly to sink to the desired depth. Retrieve the line by stripping it in short, erratic pulls, mimicking a swimming baitfish. Vary the speed and length of your strips.
  - **Swing:** In rivers or currents, cast across or slightly upstream and allow the fly to swing downstream with the current, maintaining tension on the line.
  - **Pause:** Incorporate pauses during your retrieve. Many strikes occur when the fly is momentarily suspended or sinking.
- **Setting the Hook:** When you feel a strike, set the hook firmly by raising your rod tip and stripping line simultaneously.

6. Maintenance and Care

Proper care will extend the life and effectiveness of your CALANDIS fishing fly.

- **Rinse After Use:** After fishing, especially in saltwater, rinse the fly thoroughly with fresh water to remove salt, dirt, and debris.
- **Dry Completely:** Allow the fly to air dry completely before storing it. Do not store wet flies, as this can lead to mildew or damage to the feathers and hook.
- **Inspect Hook:** Regularly check the hook for sharpness. Sharpen if necessary using a hook sharpener. Inspect for rust or bending.
- **Storage:** Store flies in a dry, well-ventilated fly box or container to prevent crushing of feathers and tangling.

7. Troubleshooting

Common issues and their solutions:

- **Feathers Tangled or Matted:**

  If feathers become tangled or matted, gently comb them out with a fine-toothed comb or your fingers. A light rinse and air dry can also help restore their shape.
- **Hook Bent or Dull:**

  A bent hook can be carefully straightened with pliers, but if severely bent or weakened, it is recommended to replace the fly. A dull hook should be sharpened immediately to ensure effective hook sets.
- **Fly Not Sinking Properly:**

  Ensure there is no debris caught on the fly. If using in fast currents, consider adding a small split shot or using a heavier leader/tippet if appropriate for your fishing style and target species.

8. What's in the Box

The package for the CALANDIS Trout Salmon Steelhead Fly Fishing Streamer Fly includes:

- 1 Piece Fly Fishing Flies
