TROUBLESHOOTING

Problem	Possible Cause	Solution
Litter scatter outside the box.	Cat digging vigorously; litter level too high; cat exiting quickly.	Ensure litter level is appropriate (not overfilled). Consider placing a litter mat at the entrance. The hooded design is intended to minimize scatter.
Difficulty separating layers for cleaning.	Components are tightly interlocked; plastic may be stiff.	Apply gentle, even pressure when separating. Avoid excessive force to prevent damage. Ensure no litter or debris is wedged between layers.

Problem	Possible Cause	Solution
Urine leakage between layers.	Cat urinates high on the sides; layers not fully sealed.	Ensure all layers are securely snapped together during assembly. If your cat consistently urinates high, consider using a litter liner that extends up the sides or increasing litter depth.
