3.2 Connecting Microphones and Instruments

The AI-04 features versatile input options:

- **XLR/MIC/LINE Inputs:** Two combo inputs (1L and 2R) support XLR microphones, 1/4" TRS/TS line-level instruments, or Hi-Z instruments.
- **48V Phantom Power:** Activate the 48V phantom power switch for condenser microphones. Ensure phantom power is off when connecting dynamic microphones or line-level instruments.

4. OPERATING THE AI-04

4.1 Controls and Indicators

The AI-04 features intuitive controls for managing your audio:

- **Gain Knobs:** Separate gain controls for each input channel (1L and 2R) allow you to adjust the input level.
- **Signal & Overload Indicators:** LED indicators (PK) next to each gain knob show signal presence and clipping (overload). Adjust gain to avoid clipping.
- **Input/DAW Mix Knob:** Adjusts the balance between direct input monitoring and playback from your Digital Audio Workstation (DAW).
- **Low Cut Switch:** Engages a low-cut filter to reduce unwanted low-frequency noise.
- **Hi-Z Switch:** Activates high impedance mode for direct connection of guitars and other instruments.
- **Loopback Switch:** Enables the loopback function, allowing you to record computer audio along with your microphone/instrument inputs.
- **Output Volume Knob:** Controls the overall output volume to your monitors/speakers.

- **Headphone Volume Knob:** Controls the volume for the headphone output.

5. MAINTENANCE

To ensure the longevity and optimal performance of your Audio Array AI-04, follow these maintenance guidelines:

- Keep the device clean by wiping it with a soft, dry cloth. Avoid using harsh chemicals or abrasive materials.
- Protect the interface from dust, moisture, and extreme temperatures.
- Avoid placing heavy objects on top of the unit.
- Disconnect all cables when the device is not in use for extended periods.

6. TROUBLESHOOTING

If you encounter issues with your Audio Array AI-04, try the following steps:

- **No Power:** Ensure the USB cable is securely connected to both the interface and your computer. If using a separate power source (for smartphone use), ensure it is properly connected and functional.
- **No Sound Input/Output:**
 - Verify all cables (microphone, instrument, output, headphone) are securely connected.
 - Check the gain knobs for each input and the master output/headphone volume.
 - Confirm the correct input/output device is selected in your computer's sound settings (refer to Section 3.1).
 - If using a condenser microphone, ensure 48V phantom power is activated.
- **Distorted Audio:**
 - Reduce the input gain to prevent clipping (indicated by the PK LED).
 - Check the audio levels in your recording software.
- **Latency Issues:** Ensure your DAW's buffer size is set appropriately for low-latency monitoring.

If problems persist, please contact customer support.
