9. TROUBLESHOOTING

If you encounter issues with your faucet, refer to the following common problems and solutions:

Low Water Pressure:

Check if the water supply valves under the sink are fully open. Inspect the spray head nozzles for mineral buildup and clean if necessary.

Leaks from Faucet Base:

Ensure the mounting nut under the sink is securely tightened. Check the water supply line connections for tightness.

Sprayer Not Retracting Properly:

Verify that the hose weight is correctly positioned on the pullout hose and that there are no obstructions under the sink preventing smooth movement.

No Hot or Cold Water:

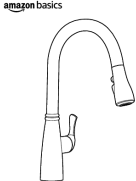

Confirm that the hot and cold water supply valves are open. Check if the hot or cold water supply lines are kinked or obstructed.
