1. Druk lang op de schakelknop van de game card switcher;
2. Sluit tegelijkertijd de USB-C-stroomkabel aan en houd de schakeltoets 4s ingedrukt, op dat moment brandt de LED geel.
3. 3. Houd de schakeltoets van de afstandsbediening ongeveer 2s ingedrukt voor het koppelen, wanneer de LED van de kaartlezer groen oplicht, betekent dit dat het koppelen is geslaagd.

Waarom wordt de Switch wakker in de slaapstand?

Dit probleem doet zich uitsluitend voor bij Switch Docks die gebruikmaken van een USB HUB-uitbreidingschipset. De oplossing is om een extra USB-oplader te gebruiken om de Game Card Switcher van stroom te voorzien in plaats van de USB-kabel in de USB-poort van het Switch-dock te steken.
