## TROUBLESHOOTING

If you encounter issues with your EZoneTronics Wireless CarPlay Adapter, refer to the following common problems and solutions:

Problem	Solution
No GPS navigation.	Yes, the product supports GPS Navigation. Ensure your phone's GPS is active and location services are enabled for the navigation app.
Device does not automatically connect next time.	The device is designed to automatically connect to CarPlay/Android Auto after initial setup. Ensure your phone's Bluetooth is on and paired with "CarPlayBox_xxxx". If issues persist, try re-pairing the device.
Slow connection speed.	The adapter offers fast plug-and-play connection within a few seconds. Ensure there are no obstructions to the wireless signal and that your phone's Wi-Fi and Bluetooth are functioning correctly. Restarting both the car's infotainment system and your phone may help.
Product does not provide CarPlay functionality to cars not equipped with CarPlay.	This product requires the original car to be equipped with Wired CarPlay. Its function is to convert your existing wired CarPlay to wireless usage, not to add CarPlay functionality to a car that lacks it.
Android Auto UI stops responding or disconnects.	This can sometimes occur. Try turning the car's display off and back on. If the issue persists, unplug the adapter and plug it back in. Ensure your phone's VPN is disabled, as some VPNs and proxies can interfere with the connection.
