5.1. Wiring

The P56201 is a wired thermostat designed for 230V AC systems. Refer to the wiring diagram below for correct connections. Ensure the main power supply is off before connecting any wires.

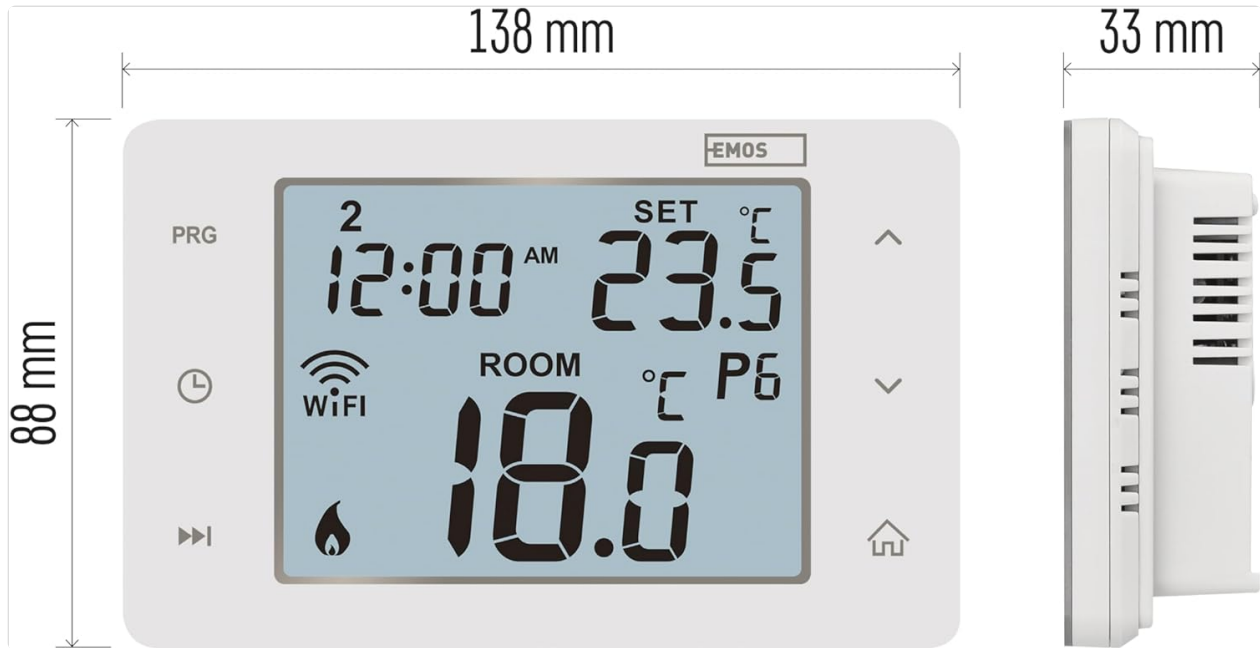

Image 5.1: Wiring terminal block for the EMOS GoSmart P56201 thermostat.

Terminal Connections:

- **1 (N):** Neutral for Main Supply 230VAC
- **2 (L):** Live for Main Supply 230VAC
- **3 (L):** Live input for boiler/heating system (Link for 230V Boilers)
- **4 (COM):** Common terminal for switching
- **5 (NO):** Normally Open contact for heating/cooling control
- **6 (NC):** Normally Closed contact (not typically used for standard heating control)

For most 230V boiler systems, connect the live wire from the boiler to terminal 3, and the switched live to terminal 5 (NO) and common to terminal 4. The thermostat itself requires 230V AC power connected to terminals 1 (N) and 2 (L).

5.2. Mounting

Mount the thermostat on a flat wall surface, away from direct sunlight, drafts, or heat sources that could affect temperature readings. Use the provided screws and wall anchors to secure the backplate to the wall, then attach the thermostat unit.
