To prevent accidents and ensure proper operation, always adhere to the following safety guidelines:

- **Electrical Safety:** Ensure the cooktop is connected to a properly grounded electrical outlet. Do not use extension cords or adapters. Disconnect power before cleaning or maintenance.
- **Cookware Compatibility:** Only use magnetic cookware suitable for induction cooking. Non-magnetic pots and pans will not heat.
- **Hot Surfaces:** Although induction cooktops heat the cookware directly, the glass surface can become hot from residual heat. Avoid touching the cooktop surface immediately after cooking.
- **Child Safety:** Keep children away from the cooktop during operation and when it is cooling down. Utilize the child lock function to prevent accidental activation.
- **Ventilation:** Ensure adequate ventilation around and beneath the cooktop as specified in the installation instructions. Do not block air vents.
- **Overheating Protection:** The cooktop is equipped with an overheating protection system that automatically shuts off the unit if the temperature exceeds safe levels.
- **Foreign Objects:** Do not place metallic objects such as knives, forks, spoons, or lids on the cooktop surface as they can become hot.

5. MAINTENANCE AND CLEANING

The tempered glass surface of your IsEasy Induction Cooktop is designed for easy cleaning and maintenance.

- **Daily Cleaning:** After each use, allow the cooktop to cool down. Wipe the surface with a soft cloth and a small amount of mild dish soap.
- **Stubborn Stains:** For more stubborn stains, use a ceramic hob scraper or a specialized induction cooktop cleaner. Always follow the cleaner's instructions.
- **Avoid Abrasives:** Do not use abrasive sponges, scouring pads, or harsh chemical cleaners, as these can scratch or damage the glass surface.
- **Spills:** Clean up spills immediately, especially sugary liquids, to prevent them from burning onto the surface and

causing permanent damage.

6. TROUBLESHOOTING

If you encounter any issues with your cooktop, refer to the following common troubleshooting tips:

- **Cooktop Not Turning On:** Check if the cooktop is properly plugged in and if the circuit breaker has tripped. Ensure the On/Off button is pressed correctly.
- **No Heat Production:** Verify that you are using induction-compatible cookware. The pot must have a magnetic base and be within the recommended size range (12-28 cm).
- **Error Codes:** If an error code appears on the display, consult the full product manual (if available) or contact customer support for specific guidance.
- **Unusual Noises:** A slight humming or buzzing sound during operation is normal for induction cooktops, especially at higher power settings, due to the magnetic field. If the noise is excessive or unusual, ensure the cookware is flat and suitable for induction.
- **Cooktop Shuts Off Unexpectedly:** This could be due to the overheating protection system. Remove the cookware, allow the cooktop to cool, and then restart. Ensure proper ventilation.
