Working Modes:

The Thermup 2.0 offers 5 distinct working modes:

Figure 7: Visual representation of the five operational modes: heating liquids, heating solid food, quick heating, sterilization, and defrosting.

1. **Heating Liquids (Milk Mode):**

   This mode is ideal for warming breast milk or formula to an optimal temperature, typically maintaining it at 37°C. Place the bottle with milk into the basket, then place the basket into the warmer. Select the 'Milk' mode. The device will heat the liquid gently and maintain the temperature.

2. **Heating Solid Food (Food Mode):**

   Use this mode to warm baby food jars. Place the food jar into the basket, then into the warmer. Select the 'Food' mode. The device will warm the food to a suitable temperature for consumption.

3. **Sterilisation Mode:**

   This mode effectively removes up to 99.9% of bacteria from bottles, pacifiers, and small accessories. Place the items to be sterilised into the sterilisation container, then place it into the warmer. Select the 'Sterilize' mode. Ensure there is sufficient water for steam generation.

4. **Defrosting Mode:**

   Safely defrost frozen breast milk or baby food. Place the frozen item in a suitable container within the basket, then into the warmer. Select the 'Defrost' mode. This mode thaws items gently to preserve nutrients.

5. **Fast Heating Mode:**

   For quick warming of liquids. Select the 'Fast' mode. This mode rapidly heats milk or water, then automatically switches to a maintenance function to keep the temperature stable. Note that heating time may vary depending on the amount and initial temperature of the liquid.

6. **Energy-Saving Mode:**
   The device also features an energy-saving mode to optimize power consumption during operation or standby.

Important Note: The heating time may vary depending on the amount of milk or water and its initial temperature (e.g., room temperature vs. refrigerated).

Maintenance

Cleaning:

- Always unplug the device and allow it to cool completely before cleaning.
- Wipe the exterior of the main unit with a soft, damp cloth. Do not use abrasive cleaners or immerse the unit in water.
- The basket, lid, and sterilisation container can be washed with warm soapy water and rinsed thoroughly. They are also dishwasher safe (top rack recommended).
- Regularly descale the heating plate to ensure optimal performance. Mix white vinegar and water (1:2 ratio) and pour into the water chamber. Let it sit for 30 minutes, then pour out and rinse thoroughly.

Storage:

Store the device in a cool, dry place when not in use, away from direct sunlight and moisture.

Troubleshooting

Problem	Possible Cause	Solution
Device does not turn on.	Not plugged in; power outage; device malfunction.	Check power connection; check household circuit breaker; contact customer support.
Device turns off automatically.	Insufficient water in the chamber.	Add water to the chamber up to the maximum level.
Heating takes too long.	Too much liquid; liquid too cold; limescale buildup.	Reduce liquid volume; use 'Fast' mode; descale the heating plate.
Sterilisation not effective.	Not enough water; items not properly placed.	Ensure sufficient water for steam; arrange items to allow steam circulation.
