

## Ecolink WST-232

# Ecolink WST-232 Wireless Home Security Door Window Sensor User Manual

## INTRODUCTION

This manual provides comprehensive instructions for the installation, operation, and maintenance of your Ecolink WST-232 Wireless Home Security Door Window Sensor. This device is designed to enhance the security of your home by detecting the opening and closing of doors and windows. It is compatible with Honeywell 5800 Wireless and 2GIG security systems.

## IMPORTANT SAFETY INFORMATION

- Read all instructions carefully before installation and use.
- Do not attempt to repair or modify the sensor. Refer all servicing to qualified personnel.
- Keep batteries out of reach of children. Dispose of used batteries properly according to local regulations.
- Ensure the sensor is installed in a location where it will not be exposed to extreme temperatures or moisture.

## PACKAGE CONTENTS

Verify that all items are present in the package:

- Ecolink WST-232 Wireless Door/Window Sensor (Main Unit)
- Magnet (for contact detection)
- Mounting Hardware (screws, adhesive tape)
- Interchangeable Brown Case
- User Manual (this document)

## PRODUCT OVERVIEW

The Ecolink WST-232 is a compact wireless sensor designed for monitoring the open/closed status of

doors and windows. It features an internal reed switch for standard magnetic contact detection and an external contact input for connecting wired devices.

## Wireless Door / Window Contact With External Contact Input

Image: Ecolink WST-232 Wireless Door/Window Sensor showing the main unit and the external contact wires.

### Key Components:

- **Main Sensor Unit:** Contains the battery, wireless transmitter, and internal reed switch.
- **Magnet:** Triggers the internal reed switch when separated from the main unit.
- **External Contact Input:** Two wires (typically red and black) for connecting an external wired contact.
- **Battery Compartment:** Located on the back of the main unit.

## SETUP AND INSTALLATION

### 1. Battery Installation

1. Open the sensor casing by gently prying it open from the side notch.
2. Insert the CR2032 lithium battery, ensuring the positive (+) side faces up.
3. Close the sensor casing securely.

### 2. Enrolling the Sensor with Your Security Panel

The WST-232 sensor is compatible with Honeywell 5800 Wireless and 2GIG security systems. Refer to your security panel's manual for specific enrollment procedures. General steps are as follows:

1. Put your security panel into programming mode for adding new wireless zones.

2. Activate the sensor by separating the magnet from the main unit, or by connecting/disconnecting the external contact wires. This sends a signal to the panel.
3. Confirm the sensor's serial number is learned by the panel.
4. Assign the sensor to an appropriate zone type (e.g., "Entry/Exit," "Perimeter").
5. Exit programming mode on your panel.

### 3. Mounting the Sensor

Choose a suitable location on your door or window frame. The sensor and magnet should be mounted within 0.5 inches (1.27 cm) of each other when the door/window is closed.

Image: Ecolink WST-232 sensor components including the main unit, magnet, and mounting screws.

#### Using Screws:

1. Position the main sensor unit on the stationary frame and the magnet on the moving part (door/window).

2. Mark the screw holes.
3. Drill pilot holes if necessary.
4. Secure both the sensor and magnet with the provided screws.

**Using Adhesive Tape (not recommended for long-term security):**

1. Clean the mounting surfaces thoroughly.
2. Apply adhesive tape to the back of the sensor and magnet.
3. Press firmly onto the desired surfaces for at least 30 seconds.

## 4. External Contact Input

The WST-232 includes an external contact input for integrating other wired devices, such as recessed door contacts or pressure mats. Connect the two wires from your external device to the red and black wires of the WST-232 sensor. The sensor will transmit a signal when the external contact opens or closes.

## OPERATING THE SENSOR

Once installed and enrolled, the Ecolink WST-232 sensor operates automatically. When the door or window it is monitoring opens, separating the magnet from the main unit (or opening the external contact), the sensor will transmit a signal to your security panel. This signal indicates an "open" state. When the door or window closes, bringing the magnet back into proximity (or closing the external contact), the sensor transmits a "closed" state signal.

Your security panel will then react according to its programming (e.g., trigger an alarm if the system is armed, log the event).

## MAINTENANCE

### Battery Replacement

The sensor uses one CR2032 lithium battery. When the battery level is low, your security panel will typically display a low battery warning for the corresponding zone. To replace the battery:

1. Put your security panel into disarm or test mode to prevent false alarms.
2. Gently open the sensor casing.
3. Remove the old CR2032 battery.
4. Insert a new CR2032 battery, ensuring correct polarity (+ side up).
5. Close the sensor casing securely.
6. Test the sensor to ensure it communicates with the panel.

### Cleaning

Clean the sensor and magnet with a soft, dry cloth. Do not use liquid cleaners or abrasive materials, as these can damage the device.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
Sensor not enrolling with panel.	Incorrect panel programming mode; sensor not activated; battery low/dead.	Ensure panel is in correct enrollment mode. Activate sensor multiple times. Replace battery. Check panel manual for specific steps.
Sensor not detecting open/close.	Magnet too far from sensor; incorrect mounting; dead battery.	Verify magnet is within 0.5 inches of the sensor. Re-mount if necessary. Replace battery.
External contact not working.	Incorrect wiring; faulty external device.	Check wiring connections to the WST-232. Test the external device independently.
Low battery warning on panel.	Battery is nearing end of life.	Replace the CR2032 battery as soon as possible.

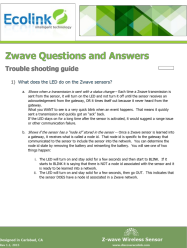

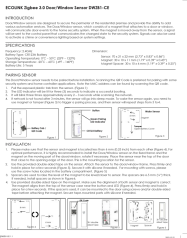

## SPECIFICATIONS

- **Model:** WST-232
- **Compatibility:** Honeywell 5800 Wireless, 2GIG
- **Dimensions:** 3 x 1.7 x 1 inches (approximate)
- **Battery:** 1 x CR2032 Lithium Coin Cell
- **Operating Frequency:** 345 MHz
- **Manufacturer:** Ecolink Intelligent Technology Inc
- **UPC:** 657479755391

WST-232 Wireless Contact with External Input

Installation Instructions

Specifications

Frequency: 345MHz  
Battery life: 5-8 years  
Magnet gap: 5/8" inch max  
Normally Closed external contact input

Operating Temperature: 32°F-120°F (0°-49°C)  
Operating Humidity: 5-95% RH non-condensing  
Compatible with Honeywell and 200C receivers  
Supervisory signal interval: 60 min (approx.)

Enrolling

To enroll the sensor, set your panel into program mode, refer to your specific alarm panel manual for details on these menus.  
When prompted by the panel:

- Touch the magnet to the side of the sensor that has three white lines. This will send a signal to the control panel as loop 2. Repeat as required.
- Connect the provided external wire, and short the wires together. This will send a signal to the control panel as loop 1. Repeat as required.

Alternatively, the 7-digit serial number printed on the back of each unit can be manually entered into the panel. For 200C systems, the equipment code is "0437".

Mounting

Included with the contact is double sided tape for the contact and the magnet. For reliable bonding ensure the surface is clean and dry. Apply the tape to the sensor and then to the desired location. Apply firm pressure for several seconds. It is not recommended to mount the tape at temperatures below 50°F, although after 24 hours the bond will hold at low temperatures. One side of the sensor is marked with 3 lines; this indicates the location of the reed switch. The magnet should be mounted facing this side of the sensor, and it must be no further than 5/8" of an inch from the sensor.  
In addition a mounting back plate with screws is provided. Simply screw the back plate onto the mounting surface and snap the sensor onto the mounting plate.  
To remove the sensor from the mounting plate, first remove the cover. At the bottom of the sensor is located the battery's metal tab will be visible. Use a small flat head screwdriver to press the plate towards the wall, the side the sensor up.

Note: Do not use the tape to secure the mounting plate to the wall.

Interchangeable Cover Feature

The contact comes from the factory assembled with a white cover, but included is an optional brown cover. To change the cover's side the front cover to disengage it from the sensor then remove. Replace with the desired cover ensuring the Top (as marked on the inside of the cover) points away from the battery. You should hear a click when the cover engages and disengages from the sensor. You do not need to replace the back plate because once mounted the back is not visible. To replace the magnet cover you will need to gently pry the white cover off with a flat head screwdriver and snap the brown cover in place.

Replacing the Battery

When the battery is low a signal will be sent to the control panel. To replace the battery:

- Slide the top cover to disengage it from the sensor, then remove it to reveal the battery. (By moving the cover will trigger a zone tamper signal to the control panel.)
- Replace with a CR2032 battery ensuring the + side of the battery faces towards you.
- Re-attached the cover, ensure the Top (as marked on the inside of the cover) points away from the battery. You should hear a click when the cover engages properly.

WST-232 Wireless Contact with External Input

Mounting

Included with the contact is double sided tape for the contact and the magnet. For reliable bonding ensure the surface is clean and dry. Apply the tape to the sensor and then to the desired location. Apply firm pressure for several seconds. It is not recommended to mount the tape at temperatures below 50°F, although after 24 hours the bond will hold at low temperatures.  
One side of the sensor is marked with 3 lines; this indicates the location of the reed switch. The magnet should be mounted facing this side of the sensor, and it must be no further than 5/8" of an inch from the sensor. An external contact may also be connected to the WST-232 with the supplied wiring connector.

Interchangeable covers

The contact comes from the factory assembled with a white cover, but included are optional brown covers. To open or change the cover, loosen the screws by turning them counter-clockwise, and then to remove the top cover, grasp it from the sides of the cover near the screws and lift. Replace it with the brown cover ensuring the Top (as marked on the inside of the cover) points away from the battery. You do not need to replace the back plate. Follow instructions in the Replacing the Battery section to replace the cover. To replace the magnet cover you will need to gently pry the white cover off with a flat head screwdriver and snap the brown cover in place.

Replacing the Battery

When the battery is low a signal will be sent to the control panel. To replace the battery:

- To open or change the cover, loosen the screws by turning them counter-clockwise, and then to remove the top cover, grasp it from the sides of the cover near the screws and lift to reveal the battery.
- Replace with a CR2032 battery ensuring the + side of the battery faces towards you.
- Re-attached the cover, ensure the Top (as marked on the inside of the cover) points away from the battery. Insert bottom cover into top cover at an angle to engage both at the top and end. Then, lower the screws into place in the bottom cover. Turn the screws clockwise to firmly secure cover.

Note: Removing the cover will trigger a zone tamper signal to the control panel.

BATTERY SAFETY

- Remove and immediately recycle or dispose of used batteries according to local regulations and keep away from children. Do NOT dispose of batteries in household trash or incinerate.
- Even used batteries may cause severe injury or death.
- Call a local poison control center for battery information.
- Non-rechargeable batteries are not to be recharged.
- Do not force discharge, recharge, disassemble, heat, over-discharge (manufacturer's specified temperature ratings) or incinerate. Doing so may result in injury due to venting, leakage or explosion resulting in chemical burns.
- Do not mix old and new batteries, different brands or types of batteries, such as alkaline, carbon-zinc, or rechargeable batteries.
