Maintenance and Care

Manual Defrosting

This Direct-Cool refrigerator requires manual defrosting. Regularly defrosting the freezer compartment is crucial for maintaining optimal cooling efficiency and preventing excessive ice buildup. To defrost:

1. Unplug the refrigerator from the power outlet.
2. Remove all food items from the freezer and refrigerator compartments.
3. Leave the freezer door open to allow ice to melt naturally. You can place towels at the bottom to absorb water.
4. Once all ice has melted, clean the interior with a soft cloth and mild detergent.
5. Dry thoroughly before plugging the refrigerator back in and returning food items.

Note: Avoid using sharp objects to remove ice, as this can damage the cooling system.

Cleaning

- **Interior:** Clean regularly with a solution of mild soap and warm water. Wipe dry with a soft cloth. The anti-bacterial gasket should also be cleaned to prevent mold and mildew.
- **Exterior:** Wipe surfaces with a soft, damp cloth. Avoid abrasive cleaners.
- **Condenser Coils:** Periodically clean the condenser coils at the back of the refrigerator to ensure efficient operation.

Unplug the appliance before cleaning.

Troubleshooting Guide

Refer to the following common issues and their solutions before contacting customer service.

Problem	Possible Cause / Solution
Refrigerator not cooling sufficiently	Ensure the door is closed properly. Check if the temperature setting is too high. Verify that the refrigerator is not overloaded with food, blocking airflow. Perform manual defrosting if there is excessive ice buildup in the freezer.
Water leaking from the back	This can occur during the defrosting process as ice melts. Ensure the drain pan is correctly positioned and not overflowing. Regularly empty and clean the drain pan.
Refrigerator is noisy	Normal operating sounds include compressor hum, refrigerant flow, and fan noise. Ensure the refrigerator is level and not touching walls or cabinets.
Frequent power outages affecting cooling	The refrigerator features 9 hours of cooling retention and auto-connect to home inverter for such situations. Ensure your inverter is functioning correctly.
