SETUP INSTRUCTIONS

1. **Unpack the Mattress:** Remove the air mattress from its carry bag and unroll it on a clean, flat surface. Ensure the area is free of sharp objects.

2. **Locate the Built-in Pump:** The electric pump is integrated into the side of the mattress. Open the power cord compartment and plug the cord into a standard 110V AC electrical outlet.

3. **Close Manual Valve:** Before inflation, ensure the manual air valve (if present) is securely closed to

prevent air leakage.

4. **Inflate the Mattress:** Turn the pump dial to the 'Inflate' position. The mattress will begin to inflate. Inflation typically takes 3-4 minutes for a Queen size.

5. **Adjust Firmness:** Once fully inflated, you can adjust the firmness using the pump's dial (Plush, Medium, Firm settings). Turn the dial to 'Off' when desired firmness is reached.

6. **First Inflation Note:** For the first use, the material may stretch. It is recommended to add additional air after 2-3 hours of initial inflation to achieve optimal firmness.
