Step-by-Step Written Instructions

- 1. Attach Headboard Legs:** Secure the headboard legs to the upholstered headboard using the provided bolts and Allen wrench. Ensure they are firmly attached but do not overtighten initially.

- 2. Assemble Side Rails:** Connect the side rails to the headboard and footboard (if applicable) using the designated hardware. Ensure the brackets are facing inward and lay towards the ground as indicated in the instructions.

3. **Install Center Support Beam:** Attach the center support beam(s) to the bed frame. These beams provide crucial support for the slats and mattress.
4. **Attach Support Legs:** Screw the support legs into the designated points on the center support beam and corners of the bed frame. For corner legs, ensure the preinstalled screws are loosened for installation, then tighten them again.

5. **Place Wooden Slats:** Lay the wooden slats across the bed frame. The slats are designed with Velcro to prevent movement and reduce noise. Ensure they are evenly spaced and securely attached.

6. **Final Tightening:** Once all components are in place and aligned, fully tighten all screws and bolts. Do not overtighten.

ADJUSTABLE HEADBOARD FEATURE

The VECELO bed frame features a height-adjustable upholstered headboard, allowing you to customize its height to best suit your mattress thickness and aesthetic preference.

- The headboard height can be adjusted from 41.7 inches to 47.7 inches.
- This feature accommodates mattresses with a recommended thickness of 6 to 12 inches.
- To adjust, loosen the bolts connecting the headboard to its support legs, slide the headboard to the desired height, and then re-tighten the bolts securely.

CARE AND MAINTENANCE

- **Cleaning:** For the upholstered headboard, gently spot clean with a damp cloth and mild detergent if necessary. Avoid harsh chemicals. For the metal frame, wipe with a dry or slightly damp cloth.
- **Regular Checks:** Periodically inspect all bolts and screws to ensure they remain tight. Re-tighten as needed to maintain stability and prevent noise.
- **Avoid Overloading:** Do not place excessive weight on the bed frame beyond its specified capacity to prevent structural damage.
- **Movement:** When moving the bed frame, lift it rather than dragging to prevent damage to the legs and frame structure.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Bed frame is wobbly or unstable.	Loose bolts or uneven legs.	Ensure all bolts are securely tightened. Check that all support legs are in full contact with the floor. Adjust if necessary.
Squeaking noises from the bed frame.	Loose connections or slats rubbing.	Re-tighten all assembly bolts. Verify that the wooden slats are properly seated and secured by the Velcro strips.
Slats are shifting or falling.	Slats not properly aligned or Velcro not engaged.	Ensure each slat is correctly positioned and the Velcro strips on the slats and frame are aligned and pressed together.

If you encounter issues not listed here or if the suggested solutions do not resolve the problem, please contact VECULO customer service for assistance.
