

Timex TW2V54000JR

Timex Men's Expedition North Titanium Automatic 41mm Watch

INSTRUCTION MANUAL

Model: TW2V54000JR

Product Overview

The Timex Expedition North Titanium Automatic watch is engineered for durability and reliability, designed to accompany you on any adventure. This timepiece features a robust titanium case, a scratch-resistant sapphire crystal, and a 21-jewel automatic movement, ensuring precise timekeeping without the need for batteries. Its water resistance up to 200 meters makes it suitable for various outdoor activities.

Key Features

- **8-inch Black Strap:** Durable and comfortable for extended wear.
- **41mm Case:** Optimal size for visibility and wrist comfort.
- **Black Dial:** Clear and legible display with contrasting markers.
- **Mineral Glass Lens:** Provides protection for the watch face.
- **Water Resistant up to 200 Meters:** Suitable for swimming, snorkeling, and diving.
- **Titanium Case:** Lightweight and highly durable material.
- **Automatic Movement:** Self-winding mechanism, powered by wrist motion.
- **Shock Resistant:** Designed to withstand impacts.
- **Anti-reflective Sapphire Crystal:** Enhanced scratch resistance and clarity.
- **Ecco™ DriTan™ Leather Strap:** Environmentally conscious leather production.

Setup

Unboxing and Initial Inspection

Carefully remove the watch from its packaging. Inspect the watch for any visible damage or irregularities. Ensure all protective films are removed from the crystal and case back.

Setting Time and Date

1. **Unscrew the Crown:** The crown is located on the right side of the watch case. Rotate it counter-clockwise until it is released from its secured position.
2. **Set the Date:** Pull the crown out to the first click position. Rotate the crown clockwise or counter-clockwise (depending on the movement) to adjust the date. Avoid setting the date between 9 PM and 3 AM, as this can interfere with the automatic date change mechanism.
3. **Set the Time:** Pull the crown out to the second click position. The second hand will stop (hacking feature). Rotate the crown to set the hour and minute hands. To ensure accuracy, synchronize with a reliable time source.
4. **Wind the Watch (Initial Setup):** If the watch has stopped, gently rotate the crown clockwise while it is in the first position (or pushed in, depending on the movement) approximately 20-30 times to provide an initial power reserve.
5. **Secure the Crown:** Once time and date are set, push the crown back in and screw it clockwise until it is firmly secured against the case. This ensures water resistance.

Side view of the watch, highlighting the crown for time and date adjustments.

Adjusting the Strap

The watch comes with a quick-release Ecco™ DriTan™ leather strap. To adjust the fit, simply use the buckle to select the appropriate hole for your wrist size. For replacement or interchangeability, locate the small lever on the spring bar at the back of the strap to easily remove or attach new straps.

Operating Your Automatic Watch

Automatic Movement

This watch is powered by a 21-jewel automatic movement, which means it winds itself using the natural motion of your wrist. When worn regularly (approximately 8-12 hours a day), the watch will maintain its power reserve. If the watch is not worn for an extended period, it may stop. In this case, manually wind it as described in the "Setup" section before wearing.

Detailed view of the transparent case back, revealing the intricate automatic movement.

Water Resistance

The Timex Expedition North Titanium Automatic watch is water resistant up to 200 meters (660 feet). This rating means it is suitable for professional marine activity and serious surface water sports, but not for saturation diving. Always ensure the crown is fully screwed down before exposing the watch to water.

- **200m (660ft):** Suitable for swimming, snorkeling, and recreational diving.
- Do not operate the crown or pushers while the watch is wet or submerged.
- Rinse the watch with fresh water after exposure to salt water or chlorine.

Luminosity (Lume)

The hands and hour markers of the watch are treated with a luminous material that glows in low-light conditions after exposure to light. The intensity and duration of the glow depend on the exposure time and intensity of the light source.

The watch dial with glowing hands and hour markers in low light conditions.

Maintenance

Cleaning Your Watch

Wipe the watch case and crystal with a soft, lint-free cloth. For stubborn dirt, a slightly damp cloth can be used. Avoid using harsh chemicals or abrasive materials, as these can damage the watch's finish or seals.

Strap Care

The Ecco™ DriTan™ leather strap is designed for durability. To maintain its appearance and longevity, avoid prolonged exposure to direct sunlight, extreme temperatures, and excessive moisture. If the strap gets wet, allow it to air dry naturally, away from direct heat.

Periodic Servicing

Like all mechanical watches, periodic servicing (typically every 3-5 years) by a qualified watchmaker is recommended to

ensure optimal performance and water resistance. This includes cleaning, lubrication, and seal replacement.

Troubleshooting

Problem	Possible Cause	Solution
Watch has stopped or is running slow.	Insufficient power reserve.	Wear the watch regularly for 8-12 hours a day. If it has stopped, manually wind it by rotating the crown clockwise 20-30 times.
Date changes at noon instead of midnight.	AM/PM setting is incorrect.	Advance the time by 12 hours.
Condensation under the crystal.	Temperature change or moisture ingress.	If minor, it may dissipate. If persistent or severe, seek professional servicing immediately to prevent damage.

For issues not listed here or if solutions do not resolve the problem, please contact Timex customer support or an authorized service center.

Specifications

Feature	Detail
Model Number	TW2V54000JR
