Troubleshooting

If you encounter issues with your induction cooktop, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Cooktop does not turn on.	No power supply; Power cord not properly plugged in; Main power switch off.	Check power outlet and plug connection; Ensure main power switch is on.
Cookware not heating.	Cookware is not induction-compatible; Cookware is too small or not centered; No cookware on the surface.	Use induction-compatible cookware; Ensure cookware is centered and covers the heating zone; Place cookware on the surface before turning on.
Display shows an error code (e.g., E0, E1).	Specific error condition (e.g., overheating, voltage issue, sensor fault).	Refer to the specific error code in a more detailed manual if available, or contact customer support. Try unplugging and re-plugging the unit after 5 minutes.
Unusual noise during operation.	Normal fan operation; Cookware vibration.	A slight humming sound from the fan is normal. Some cookware may vibrate slightly, which is not a fault.

If the problem persists after attempting these solutions, please contact customer support.
