- **Squeaking Noises:**

Cause: Loose bolts or connections.

Solution: Re-tighten all bolts and screws on the frame. Ensure all components are properly aligned and seated. The frame is designed to be squeak-resistant, but loose connections can cause noise.

- **Mattress Sliding:**

Cause: Mattress not properly seated or mattress stoppers not installed/effective.

Solution: Ensure the mattress is centered on the frame. Verify that all 8 mattress stoppers are correctly installed and positioned to hold the mattress.

- **Instability/Wobbling:**

Cause: Uneven assembly or loose connections.

Solution: Check that all legs are firmly on the ground and that the frame is level. Re-tighten all bolts. Ensure the enhanced support structure is correctly assembled.
