MAINTENANCE

Regular maintenance helps ensure the longevity and stability of your bed frame.

- **Cleaning:** Wipe the metal frame with a soft, damp cloth. Avoid abrasive cleaners or harsh chemicals that could damage the finish.
- **Tighten Connections:** Periodically check all bolts and connections to ensure they remain tight. Loose connections can lead to instability and noise.
- **Inspect Slats:** Ensure all steel slats are properly seated and undamaged. Replace any bent or broken slats immediately.

Durable construction

The metal bed frame is made of alloy steel, which is stronger and more durable than ordinary bed frames. Each bed has a plastic pad at the bottom to prevent the bed from slipping off.

TROUBLESHOOTING

If you encounter issues with your bed frame, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Squeaking or Noise	Loose bolts, uneven floor, friction between metal parts.	Tighten all bolts. Ensure the frame is on a level surface. Apply felt pads or a thin layer of lubricant (e.g., paraffin wax) to contact points between metal parts if necessary.
Frame feels unstable	Loose connections, incorrect assembly.	Re-check all connections and tighten bolts. Review assembly instructions to ensure all steps were followed correctly.

Problem	Possible Cause	Solution
Mattress slides	Lack of friction between mattress and slats.	Ensure the plastic pads on the frame legs are intact. Consider using a non-slip mattress pad between the mattress and slats.
