Troubleshooting

Problem	Possible Cause	Solution
Desk is wobbly/unstable.	Loose screws or uneven floor.	Ensure all screws are fully tightened. Adjust floor levelers if present, or place shims under legs on uneven surfaces.
Power outlets not working.	Desk not plugged in, circuit breaker tripped, or faulty unit.	Check if the desk's power cord is securely plugged into a working wall outlet. Check your home's circuit breaker. If issues persist, contact customer support.
Assembly holes do not align.	Parts are oriented incorrectly or screws are overtightened prematurely.	Review the assembly instructions carefully to ensure correct part orientation. Loosen all screws slightly, align parts, then tighten gradually.
