Troubleshooting

This section addresses common issues you might encounter with your AORUS 7 laptop.

No Power / Laptop Not Turning On

- **Check Power Connection:** Ensure the power adapter is securely plugged into both the laptop and a working power outlet. Verify the outlet is functional.
- **Battery Charge:** If running on battery, ensure it has sufficient charge. Connect the power adapter and wait a few minutes before attempting to power on.
- **Hard Reset:** Disconnect the power adapter, press and hold the power button for 15-20 seconds, then reconnect power and try again.

Display Issues

- **No Display:** If the laptop powers on but the screen remains black, try connecting an external monitor to check if video output is working. This can help determine if the issue is with the laptop's internal display or the graphics card.
- **Flickering/Distorted Display:** Update your graphics drivers from the GIGABYTE support website or NVIDIA's official site. Check display cable connections if using an external monitor.
- **Incorrect Resolution/Refresh Rate:** Right-click on the desktop, select "Display settings," and adjust the resolution and refresh rate to the recommended values (1920x1080, 360Hz).

Network Connectivity Problems

- **Wi-Fi Not Connecting:** Ensure Wi-Fi is enabled in Windows settings. Restart your router/modem. Update Wi-Fi drivers.
- **Slow Internet:** Check your internet service provider (ISP) connection. Ensure no background applications are consuming excessive bandwidth.

Performance Issues / Overheating

- **Slow Performance:** Close unnecessary applications. Check Task Manager for high CPU/RAM usage. Ensure sufficient free space on your SSD.
- **Overheating:** Ensure cooling vents are clear of obstructions. Use the GIGABYTE Control Center to adjust fan speeds. Consider using a laptop cooling pad during intensive tasks.

If these steps do not resolve your issue, please refer to the Warranty and Support section for further assistance.
