OPERATING INSTRUCTIONS

The Hanstrom Saxon 4-in-1 tap offers four water dispensing functions: cold, hot, boiling, and filtered water.

Dispensing Water:

- **Cold Water:** Operate the designated lever or handle for cold water.
- **Hot Water:** Operate the designated lever or handle for standard hot water.
- **Filtered Water:** Operate the designated lever or handle for filtered water.
- **Boiling Water:** The boiling water dispenser features a child-safe spring lock. To dispense boiling water, engage the safety mechanism (typically by pushing down and turning or pulling) and then operate the boiling water lever. Release the lever to stop the flow.

Temperature Adjustment:

The digital touch-sensitive control on the boiler allows for precise temperature adjustment of the boiling water. Preset temperatures available are 75°C, 85°C, 90°C, and 95°C. These settings are accurate to within 0.5°C, ensuring your water is always at the desired temperature.

Child Safety Feature:

For your safety and peace of mind, the boiling water function is equipped with a child-safe spring lock. This mechanism prevents accidental dispensing of hot water, making it impossible to turn on the tap unintentionally. Always ensure the safety lock is engaged after use.

MAINTENANCE

Water Filter Replacement:

The included water filter should be changed approximately once every 6 months to ensure optimal water quality and system performance. The system includes a filter monitoring system to assist in tracking filter life.

Cleaning:

To maintain the chrome finish of your Hanstorm Saxan tap, clean regularly with a soft cloth and mild, non-abrasive cleaning agents. Avoid harsh chemicals or abrasive scrubbers, as these can damage the finish. For the boiler unit, wipe down the exterior with a damp cloth as needed.

If you encounter any issues with your Hanstorm Saxan 4-in-1 tap, please review the following common points before contacting support:

- **No boiling water:** Check if the boiler is plugged in and powered on. Ensure the digital touch screen control is active and the desired temperature is set. Verify that the child-safe lock mechanism is fully engaged during operation.
