Troubleshooting

If you encounter any issues with your cabinet, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Cabinet feels wobbly or unstable.	Loose fasteners; uneven floor; anti-tilt kit not installed.	Ensure all screws are tightened. Place shims under legs if floor is uneven. Install the anti-tilt kit as per instructions.
Drawers do not slide smoothly.	Misaligned drawer slides; obstruction; excessive weight.	Check if drawer slides are correctly installed and aligned. Remove any obstructions. Reduce weight in the drawer.
Cabinet doors do not close properly.	Misaligned hinges; magnetic catch not engaging; obstruction.	Adjust hinges if necessary. Check if the magnetic catch is properly aligned and free of debris. Remove any items blocking the door.
Missing parts during assembly.	Packaging overlooked; manufacturing error.	Double-check all packaging materials. Contact Yaheetech customer support for replacement parts.
