7. Troubleshooting

If you encounter issues with your CREAMOON Portable Washing Machine, refer to the following common problems and solutions:

Problem	Possible Cause	Solution

Problem	Possible Cause	Solution
Machine does not turn on.	No power supply; Power button not pressed correctly.	Ensure the power adapter is securely plugged into both the machine and a working electrical outlet. Press and hold the power button for 2 seconds to activate.
Water is leaking from the bottom.	Drain plug not properly sealed; Drain hose improperly positioned.	Check that the drain plug is securely closed. Ensure the drain hose is correctly installed and not obstructed.
Washing action is weak or inconsistent.	Overloaded with clothes; Insufficient water level.	Reduce the amount of laundry. Add more water, ensuring it does not exceed the maximum fill line.
Semi-dehydration (spin) is ineffective.	Draining basket not properly seated; Overloaded basket; This function is for semi-dehydration, not complete drying.	Ensure the draining basket is correctly placed and not overloaded. This function is designed to remove excess water, not to fully dry clothes. Manual wringing may be required.
Machine makes unusual noise.	Unstable surface; Foreign object in tub; Overloaded.	Place the machine on a stable, level surface. Check for and remove any foreign objects. Reduce the laundry load.

If the problem persists after attempting these solutions, please contact customer support for further assistance.
