Key Features:

- **Dual Interface:** Equipped with both USB Type-C and USB 3.2 Type-A connectors for broad compatibility.
- **High-Speed Transmission:** Offers read speeds up to 400MB/s and write speeds up to 300MB/s, enabling quick transfer of large files.
- **Durable Design:** Zinc alloy casing provides resistance against drops and scratches. The metal flip cover protects the interfaces.
- **Portable:** Compact and lightweight design for easy carrying.

Engine-hood Design

Both ends feature a sports car hood-like design that greatly protects against wear and scratches.

5. SETUP

Connecting to a Device:

1. Identify the appropriate port on your device (USB Type-A or USB Type-C).
2. Gently flip open the metal cover to expose the required connector.
3. Insert the Netac US5 SSD firmly into the corresponding port on your computer, smartphone, game console, or other compatible device.
4. The device should be automatically recognized by your operating system. If not, check your device's USB settings or try a different port.

Wide Compatibility

Support Windows/Mac OS/Linux/Android systems, and widely compatible with Android smartphones, MacBook, TV, speakers, etc.

Initial Formatting (if required):

For optimal performance and compatibility, especially if using the drive for the first time or with a new operating system, you may need to format the drive. Refer to your operating system's documentation for instructions on how to format an external drive. Common file systems include exFAT (for broad compatibility across Windows and macOS) or NTFS (for Windows) / APFS (for macOS).

6. OPERATING INSTRUCTIONS

Data Transfer:

- Once connected, the Netac US5 will appear as a removable storage device.
- To transfer files, drag and drop them to and from the drive's folder.
- For large files, ensure your device supports USB 3.2 for maximum transfer speeds.

High-speed Transfer

With USB 3.2 Gen 2, the transfer speed is up to 550MB/s.

File Encryption:

The US5 supports file encryption functions, providing reliable protection for your data. This feature is typically managed through your operating system's built-in encryption tools (e.g., BitLocker for Windows, FileVault for macOS) or third-party software. Consult your OS documentation for specific instructions on enabling and managing encryption.

Safe Removal:

Always safely eject the drive before disconnecting it from your device to prevent data loss or corruption. The procedure varies slightly by operating system:

- **Windows:** Right-click the drive icon in 'This PC' or the taskbar, then select 'Eject'.
- **macOS:** Drag the drive icon to the Trash, or click the Eject button next to the drive in Finder.
- **Android/Other:** Look for an 'Eject' or 'Unmount' option in the storage settings.

7. MAINTENANCE

- **Cleaning:** Use a soft, dry cloth to clean the exterior of the drive. Do not use liquid cleaners or solvents.
- **Storage:** When not in use, keep the metal flip covers closed to protect the connectors from dust and damage. Store in a cool, dry place.
- **Data Backup:** Regularly back up important data stored on the SSD to another location to prevent accidental loss.
- **Firmware Updates:** Check the Netac official website periodically for any available firmware updates for your US5 SSD to ensure optimal performance and compatibility.

8. TROUBLESHOOTING

Common Issues and Solutions:

Issue	Possible Solution
Drive not recognized	Try a different USB port or cable. Ensure the drive is firmly connected. Check your device's Disk Management (Windows) or Disk Utility (macOS) to see if it appears unformatted.
Slow transfer speeds	Ensure you are using a USB 3.2 compatible port on your device. Older USB 2.0 ports will result in slower speeds. Close other applications that might be using system resources.
Data corruption	Always safely eject the drive before disconnecting. If corruption occurs, try running a disk check utility (e.g., 'chkdsk' on Windows, 'First Aid' on macOS).
Drive gets warm during use	It is normal for the metal casing to become warm during extended high-speed data transfers. This is due to efficient heat dissipation. If it becomes excessively hot, disconnect and allow it to cool.
