SETUP AND ASSEMBLY

The HLIPHA Metal Platform Bed Frame is designed for easy assembly. All necessary tools and hardware are included in the package. We recommend assembling the bed frame with two people for optimal ease and speed, though it can be assembled by one person.

Assembly Steps:

1. **Unpack Components:** Carefully remove all parts from the packaging and lay them out on a clean, soft surface to prevent scratches. Verify all components are present according to the parts list in your manual.
2. **Assemble Headboard and Footboard:** Attach the vertical support bars to the horizontal headboard and footboard sections using the provided bolts and Allen wrench. Ensure all connections are firm.
3. **Connect Side Rails:** Attach the assembled headboard and footboard to the side rails. Secure these connections with the appropriate hardware.
4. **Install Center Support Beams:** Place and secure the center support beams across the frame. These beams provide crucial stability.
5. **Lay Out Slats:** Position the metal slats across the bed frame. The slats are designed to fit securely into the frame, providing a robust foundation for your mattress without the need for a box spring.

MAINTENANCE

To ensure the longevity and continued performance of your HLIPHA Metal Platform Bed Frame, follow these simple maintenance guidelines:

- **Cleaning:** Wipe down the metal frame with a soft, damp cloth. Avoid using harsh chemicals or abrasive cleaners, which can damage the powder-coated finish.
- **Regular Inspection:** Periodically check all bolts and connections to ensure they remain tight. Retighten any loose hardware as needed to maintain stability and prevent squeaking.
- **Avoid Overloading:** Adhere to the maximum weight capacity of 1200 pounds to prevent structural damage.

TROUBLESHOOTING

If you encounter any issues with your bed frame, refer to the following common troubleshooting tips:

- **Squeaking Noises:** If the bed frame begins to squeak, first ensure all bolts are securely tightened. Sometimes, applying a small amount of lubricant to the connection points can also help. Some users find that applying foam tape (often included with the product) to the metal slats or support beams can eliminate noise from metal-on-metal contact.
- **Instability:** If the frame feels unstable, re-check all assembly steps to ensure every component is correctly installed and all fasteners are tightened. Ensure the bed is placed on a flat, even surface.
- **Missing Parts:** If any parts are missing upon unboxing, please contact HLIPHA customer support for assistance.
