MAINTENANCE

Cleaning

Regular cleaning is essential to prevent mineral buildup and mold. Clean your humidifier before first use and at least once a week.

1. Unplug the humidifier.
2. Remove the top cover and empty any remaining water from the tank and base.
3. Wipe the inside of the water tank and the base with a soft cloth. For mineral buildup, use white vinegar to soak the affected areas for 15-20 minutes, then scrub gently and rinse thoroughly.
4. Clean the transducer (the small disc in the base) with the provided cleaning brush.
5. Rinse all parts and dry them completely before reassembling.

Water Filter Sponge Replacement

The water filter sponge helps capture impurities. Replace it regularly to maintain humidifying efficiency.

- **When to Change:** Generally lasts 1 month, depending on water hardness.
- **Where to Buy:** Search for "LEVOIT 10-Pack Humidifier Replacement Filters" or B09ZY9N6PD on Amazon.

TROUBLESHOOTING

- **White Dust:** If white dust appears, it is likely due to hard water. We recommend using purified or distilled water to avoid this.
- **No Mist/Low Mist:** Ensure the water tank is filled, the unit is properly assembled, and the transducer is clean. Check for any blockages in the mist nozzle.
- **Humidifier Not Turning On:** Verify the power cord is securely plugged into both the unit and the outlet. Check if the outlet is functional.
- **Unusual Noise:** Ensure the humidifier is on a flat, stable surface. Check for any foreign objects in the water tank or base.
- **App Connectivity Issues:** Ensure your Wi-Fi network is 2.4GHz, your phone is close to the humidifier, and the VeSync app is updated. Try restarting both the humidifier and your phone.
