MAINTENANCE

Regular maintenance ensures optimal performance and longevity of your air cooler:

- **Clean Dust Filter and Cooling Pads:** Regularly clean the dust filter and cooling pads to prevent accumulation of dust and maintain efficient air purification and cooling. Refer to the product diagram (Figure 1) for the location of the evaporative air filter.
- **Water Tank Cleaning:** Periodically empty and clean the water tank to prevent mold or mildew growth. Use a soft cloth and mild detergent if necessary, then rinse thoroughly.
- **Exterior Cleaning:** Wipe the exterior of the unit with a soft, damp cloth. Do not use abrasive cleaners or solvents.

TROUBLESHOOTING

If you encounter issues with your Symphony Duet Mini, consider the following common solutions:

- **Unit Not Turning On:**

- Ensure the C-Type USB cable is securely connected to both the cooler and the power source.
- Verify that the power source (USB adapter, laptop port, power bank) is functional and providing power.

- **Insufficient Cooling:**

- Check the water level in the tank and ensure it is filled with cold water.
- Allow 3-5 minutes after filling for the cooling pads to become fully saturated.
- Clean the dust filter and cooling pads, as blockages can reduce airflow and cooling efficiency.
- Ensure the unit is placed close to you for personal spot cooling, as its effect is localized.

- **Water Leakage:**

- Ensure the unit is placed on a completely level surface. Tilting can cause water to spill from the tank.
- Do not overfill the water tank beyond the maximum fill line.

- **Weak Airflow:**

- Check if the fan speed is set to a higher setting using the touch panel controls.
- Clean the air filter and cooling pads.
