6.1 Cleaning

To clean the thermometer, simply wipe it with a clean, dry, or slightly damp cloth. Do not use abrasive cleaners or immerse the device in water.

6.2 Charging

Recharge the thermometer when the battery indicator suggests low power or when the display becomes dim. Regular charging ensures continuous and accurate temperature monitoring.

7. TROUBLESHOOTING

- **Thermometer not turning on:** Ensure the device is fully charged. Connect it to the charging cable and allow sufficient time

for charging.

- **Inaccurate temperature readings:** Ensure the thermometer is placed correctly on the outside of the tank, allowing it to accurately sense the water temperature through the glass. Allow a few minutes for the temperature to stabilize after placement or significant water changes. If comparing with another thermometer, ensure both are calibrated and placed similarly.
- **Display is dim or unresponsive:** This may indicate a low battery. Recharge the device.
- **Charging cable is too short:** While the provided charging cable is compact, you can use any standard USB charging cable of appropriate length with a compatible power source (e.g., a longer phone charging cable or a portable power bank).
