SETUP AND INSTALLATION

Proper installation of the replacement filter is crucial for the vacuum cleaner's efficiency and longevity. Always ensure the vacuum is switched off before attempting to replace the filter.

Replacing the Filter:

- Step 1:** Press the dust container release button (A) and pull to detach the dust container (B) from the main vacuum unit.
- Step 2:** Carefully remove the old foam filter (C) from the dust container (B).

3. **Step 3:** Fit a new foam filter (C) firmly onto the dust container (B). Ensure the filter is oriented correctly, with the "THIS SIDE UP" text facing upwards if present.
4. **Step 4:** Attach the dust container (B) back to the main unit, ensuring it clicks securely into place.

OPERATING PRINCIPLES

These replacement filters are an integral part of your vacuum cleaner's filtration system. They are designed to capture fine dust particles and allergens, preventing them from being recirculated into the air. The soft material construction of the filter enhances suction power while effectively filtering debris, contributing to a cleaner home environment.

Replacing The Filter

Replace the filter every 6 months or if heavily soiled

MAINTENANCE

Regular maintenance of your filters ensures optimal performance of your vacuum cleaner and prolongs its lifespan.

Cleaning the Filter:

- The filters are washable for easy maintenance and increased hygiene.
- To clean, gently tap the filter to remove loose debris.
- Rinse the filter under cool, running water until the water runs clear.

- Allow the filter to air dry completely for at least 24 hours before reinserting it into the vacuum. Do not use a dryer or direct heat.

Replacement Schedule:

For optimal filtering performance and vacuum efficiency, it is recommended to replace the filters every 3 months under normal use, or more frequently if heavily soiled.

TROUBLESHOOTING

If you experience issues after replacing your filter, consider the following:

- **Reduced Suction:** Ensure the filter is completely dry before reinstallation. A damp filter can restrict airflow. Also, check that the filter is seated correctly and the dust container is properly sealed.
- **Filter Not Fitting Correctly:** Verify that you have the correct replacement filter for your specific vacuum model (B0C2YNLL16). While these filters are designed for compatibility, slight variations in manufacturing or previous models might occur. Ensure no foreign objects are obstructing the filter's seating area.

- **Unusual Noises:** A misaligned or improperly installed filter can cause unusual noises. Re-seat the filter and ensure all components of the dust container are securely attached.
