## 2. SETUP AND INSTALLATION

Proper installation is crucial for the optimal performance of your portable air conditioner. Follow these steps to set up your unit.

### 2.1 Unpacking and Placement

- Carefully remove the unit and all accessories from the packaging.
- Place the unit on a flat, stable surface. Ensure there is at least 20 inches of space around the unit for proper airflow.
- Allow the unit to stand upright for at least 2 hours before operation if it was transported on its side.

### 2.2 Window Kit Installation

The portable air conditioner comes with a sliding window kit suitable for vertical or horizontal sliding windows between 25.6 inches and 50.2 inches.

1. Connect the hose connector to one end of the exhaust hose.
2. Connect the window kit adapter to the other end of the exhaust hose.
3. Extend the adjustable length of the window kit to fit your window opening.
4. Attach the hose connector to the exhaust air outlet on the back of the AC unit.
5. Close your window and secure the window kit in place.
6. Extend the exhaust hose and insert the window kit adapter into the opening in the window kit.

#### 3.1 Cooling Mode

In Cooling mode, the unit provides powerful cool air to reduce room temperature. It is ideal for hot weather conditions.

- Set desired temperature between 61°F and 90°F using the remote or control panel.
- The unit will automatically adjust compressor operation to maintain the set temperature.

### 3.2 Heating Mode

In Heating mode, the unit provides warm air, suitable for colder environments.

- Set desired temperature between 61°F and 90°F.
- The unit will provide heat to a space up to 350 sq. ft.

### 3.3 Dehumidifier Mode

This mode helps reduce humidity levels in the room, creating a more comfortable atmosphere.

- The unit will extract moisture from the air.
- Utilize the continuous drainage option for extended dehumidification.

## 4. MAINTENANCE

Regular maintenance ensures the longevity and efficient operation of your Wiytamo portable air conditioner.

### 4.1 Air Filter Cleaning

The unit is equipped with a removable and reusable air filter. It is recommended to clean the filter monthly to ensure optimal performance and clean air.

1. Turn off and unplug the unit before cleaning.
2. Remove the air filter from the back of the unit.
3. Wash the filter with warm, soapy water.
4. Rinse thoroughly and allow it to air dry completely before reinserting.

## 4.2 Drainage

The unit features a self-evaporation system in cooling mode, reducing the need for manual drainage. However, for dehumidifier mode or if the internal tank fills, manual drainage is required.

- **Continuous Drainage:** Connect a water pipe to the upper drain hole for continuous drainage, suitable for dehumidifier mode.
- **Manual Drainage:** When the internal water tank is full, the unit may indicate a full tank. Place a shallow pan under the lower drain plug and remove the plug to drain the water.

## 5. TROUBLESHOOTING

If you encounter issues with your unit, refer to the following common troubleshooting steps:

Problem	Possible Cause	Solution
Unit does not turn on.	No power, power cord unplugged, circuit breaker tripped.	Ensure unit is plugged into a working outlet. Check circuit breaker.
Unit is running but not cooling/heating.	Air filter dirty, exhaust hose not properly installed, room too large, doors/windows open.	Clean air filter. Ensure exhaust hose is securely connected and window kit sealed. Close all doors and windows. Verify room size is within specifications.
Water leakage.	Drain plug not securely closed, internal water tank full.	Ensure drain plugs are securely closed. Drain the internal water tank if full.
Unit is noisy.	Unit not on a level surface, fan speed too high.	Place unit on a flat, stable surface. Reduce fan speed if noise is excessive.
